# PLAYBOOK OVERVIEW

1. Introduction
2. Taxonomy

# PLAYBOOK OVERVIEW | INTRODUCTION

## Background & Goals

- The goal of the State Data Modernization Playbook is to provide a set of tools and resources to guide an assessment, gap analysis and future state design of a state data system
- The Playbook elements have been designed to be broadly applicable to states and across different sectors of state data

## Target Audience & Using the Playbook

- The Playbook is targeted towards organizations conducting a deep-dive assessment of a single state data aggregator who covers either one data sector (e.g. higher education) or cross-sector data (e.g. P-20W)
- The Playbook and all the elements are designed around an Assessment Framework. The Playbook elements and framework categories can be used in a modular way
- The Playbook elements consist of a mix of PowerPoint templates (included here) and more comprehensive Excel and PowerPoint tools (described here with references to the complete tools)

# PLAYBOOK OVERVIEW | TAXONOMY

*The following terms are referenced in this document.*

## Individuals / Organizations:

- **Data Aggregator:** Organization that collects, links, enriches, and shares data to develop insights
- **Data Consumer:** Any organization or individual that accesses data from aggregators to draw insights
- **Institutions:** Education institutions that function as data providers
- **Data Provider:** Any organization that collects individual data and provides it to a data aggregator

## Other Terms:

- **P-20W:** Includes pre-school, K-12, higher education and workforce sectors
- **Persona:** Data-driven archetype that describes the goals and observed behavior patterns, expectations, and needs of a cluster of stakeholders
- **Sector:** Portion of P-20W set (e.g., Pre-school, K-12)
- **State Longitudinal Data System (SLDS):** Data set that connects individual-level data over time

# CURRENT STATE ASSESSMENT TEMPLATES

1. Assessment Framework
2. Data Request
3. Interview Guides
4. Personas, Use Cases, and Voice of the Customer
5. Systems Architecture Evaluation

# ASSESSMENT FRAMEWORK | OVERVIEW

## Playbook Element Overview

**Objective:** To provide a framework for evaluating a state data system grounded in key design principles

**Target Audience(s):** Organizations conducting state data assessments, organizations in the process of designing new state data systems

## Format of the Element

PowerPoint slides, included in this Playbook

- *Design Principles:* Defines nine tenants that guide optimal design of state data systems
- *Analysis Areas:* Identifies detailed areas for analysis within each design principle area

## How to Use the Element

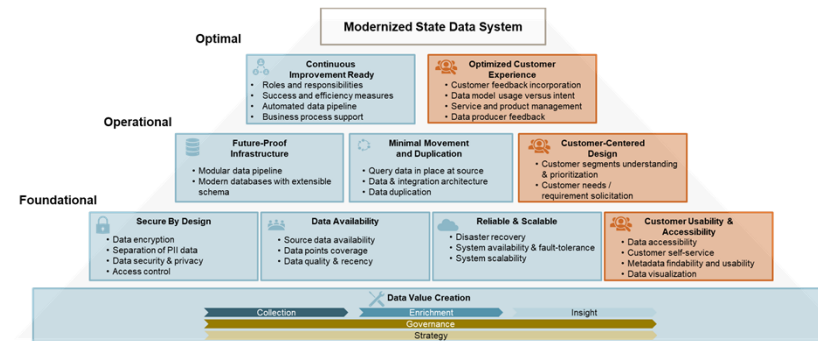

- Determine the scope of, and goals for, the state data assessment
- Identify specific Assessment Framework areas that are relevant to the assessment
- Identify other Playbook elements to be used based on selected Assessment Framework areas

## Dependencies on Other Playbook Elements

The Assessment Framework is an organizing mechanism for all the other current state Playbook elements but is not dependent specifically on any others.

## Relevant Assessment Framework Principles

- All

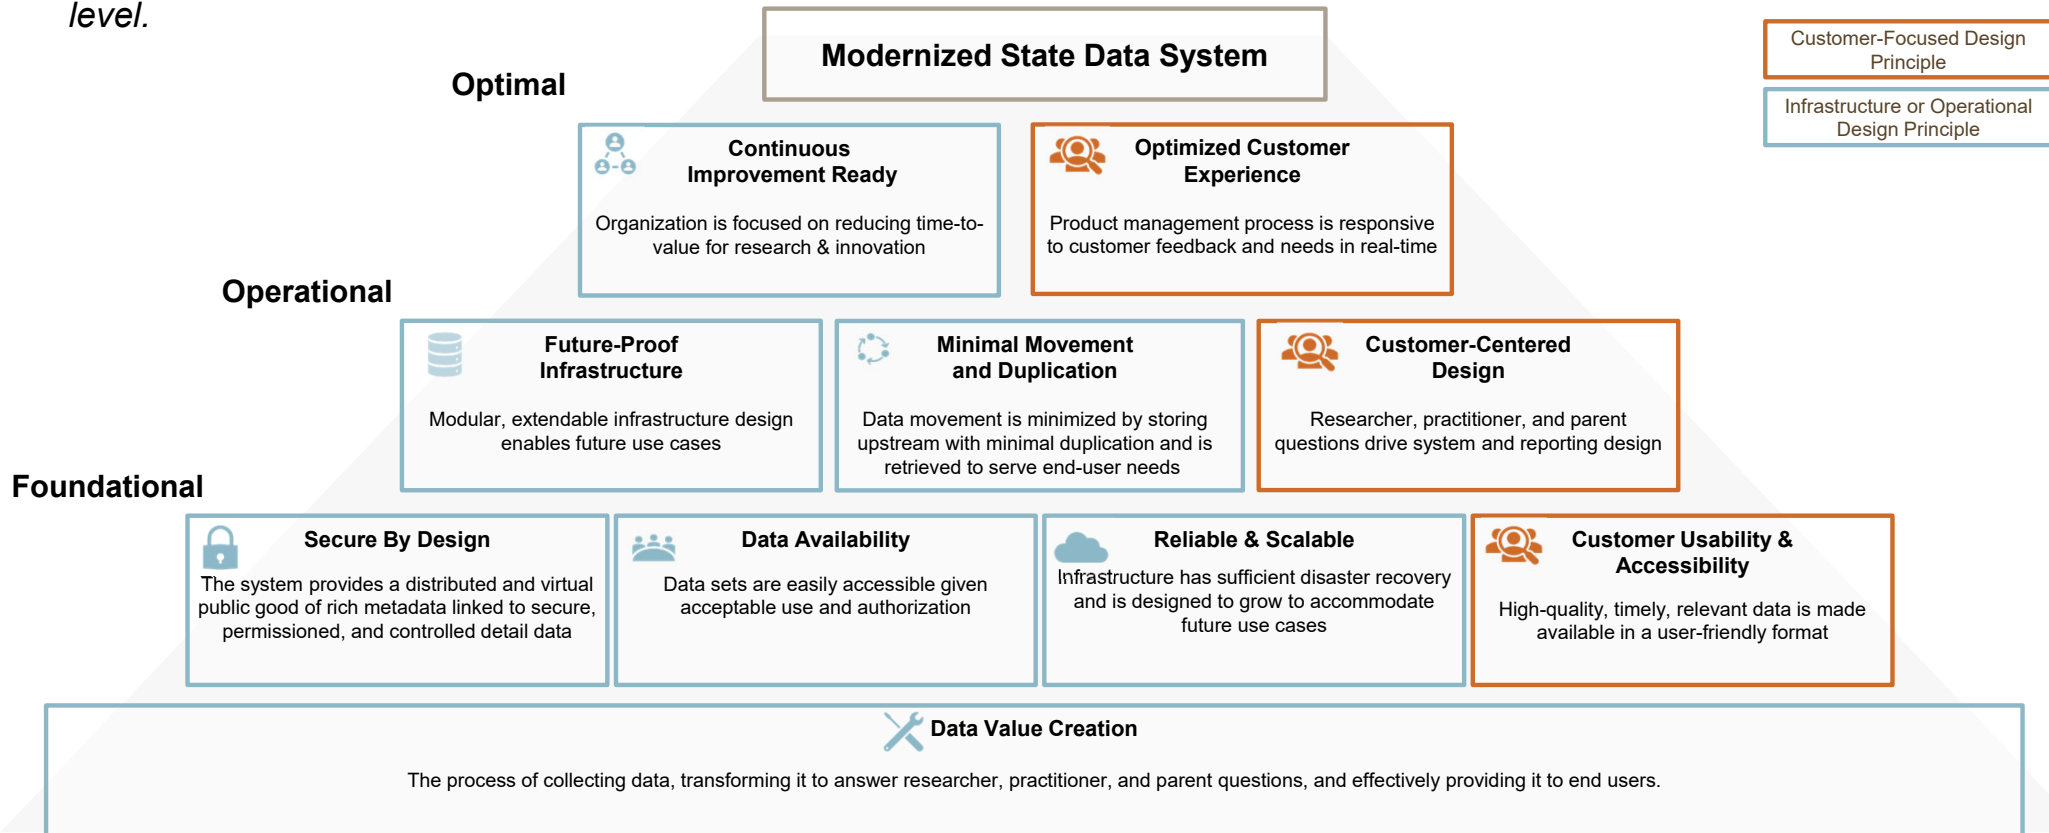

## Key Inputs

- Directional understanding of the needs and issues currently experienced in a state data system
- Input from key contacts at the state data organization/agency
- Understanding of the assessment goals
- Identified organization to conduct the assessment

# ASSESSMENT FRAMEWORK | DESIGN PRINCIPLES

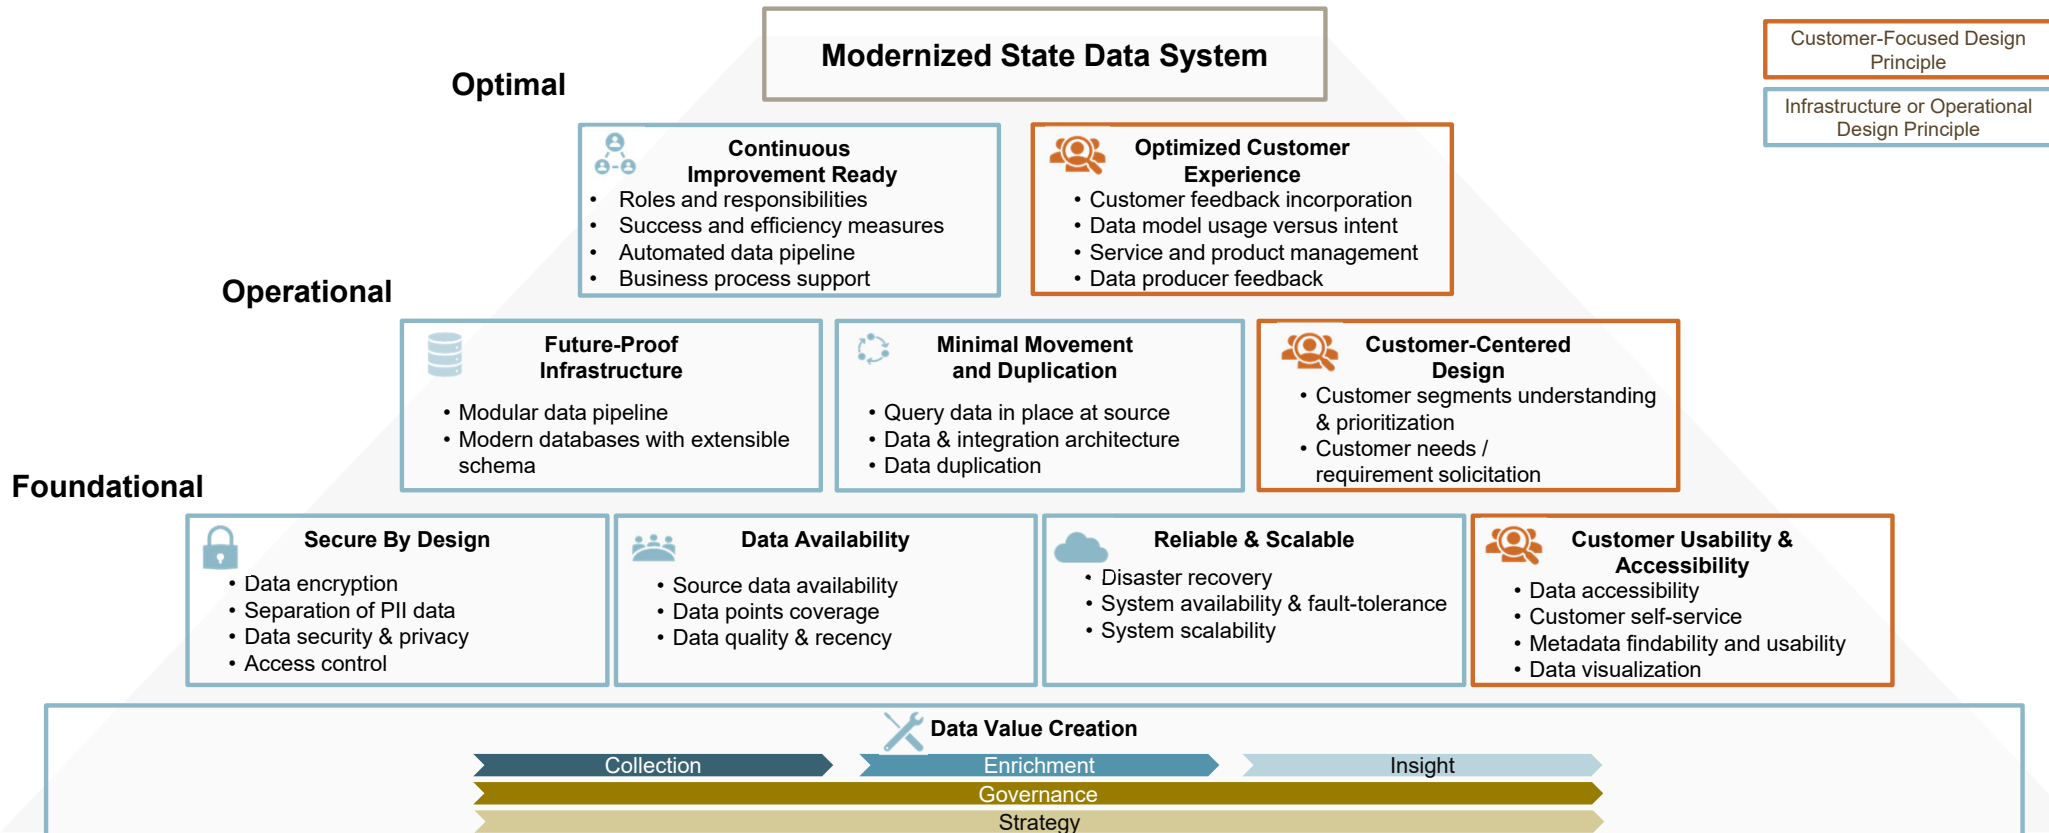

*A modern state data system requires designing or re-designing systems and processes to support the needs of end-users. A state data aggregator can be characterized by a general level of maturity, and specific principles are appropriate at each level.*

# ASSESSMENT FRAMEWORK | ANALYSIS AREAS

The Assessment Framework is organized around the State Data Modernization Design Principles. These principles are broken down into specific areas for analysis and assessment.

# DATA REQUEST | OVERVIEW

## Playbook Element Overview

**Objective:** To outline existing documentation to collect from an assessed state data aggregator to inform the current state assessment; can filter by Assessment Framework areas

**Target Audience:** Organizations conducting state data assessments, particularly those focused on assessing the infrastructure and operational elements of the system

## Format of the Element

Excel document with two tabs:

- **Data Request Tracker Tab:** identifies which documents to request from the assessed organization and how elements relate to the Assessment Framework
- **File Analysis Tab:** lists files returned by target organization and their relationship to the data request tab; includes file name, summary of file contents, and relevance of file for assessment
- **Fulfillment Summary Tab:** simple pivot table summarizing status of file receipt

## How to Use the Element

- Identify primary assessment goals
- Filter data request tab by design principles to be targeted
- Sort data request line items by helpfulness
- Submit data request to relevant parties
- Identify files submitted in response to the data request from the client
- Use the file analysis tab to pair file relationships with the data request tab, summarize file contents, and sort the relevance of the file to each of the assessment elements

## Dependencies on Other Playbook Elements

Dependent on the selected sections of the Assessment Framework

## Relevant Assessment Framework Principles

- All, data request submitted to relevant parties will depend on objective of assessment

## Key Inputs

- Understanding of assessment goals
- Input from key contacts at the state data organization/agency
- Single point of contact at the assessed state data aggregator to orchestrate and respond to data request
- File sharing methodology (e.g., Teams, Box, Dropbox, etc.)

# DATA REQUEST | TRACKER

*Use the data request tracker to select relevant files and information to request and then to track which requests were completed, delayed, or unable to be fulfilled.*

Create a central, shared file repository where the data aggregator employees can upload files in response to the data request

The design principle column indicates what data requests are relevant to which design principle(s)

Based on the focus of an assessment, users can prioritize items on the data request

Track the date each data request was returned to the assessment team for project management purposes

Indicate which data aggregator employee is responsible for providing the data request

Data Modernization Project - Data Request File									
Please upload files to XXXXXXXXXX									
ID#	Request	Design Principle(s)	Priority	Date Requested	Date Received	Status	Assigned To	File Name	Comments
1	Reporting Systems Landscape 1) List of business systems (enterprise applications) which support key reporting functions 2) List of reporting applications and tools 3) Architecture diagram(s) and data flow diagram(s) representing up/downstream transactional systems, internal/external interfaces, data repositories (e.g. Data Warehouse), data flows, analytics/reporting tools, etc. 4) List of data sources; please notate manual collection vs automated data feeds	Data Value Creation, Minimal Movement and Duplication, Future-Proof Infrastructure							
2	Documentation on data collection and data transformation processes, process maps, procedures	Data Value Creation							
3	Data dictionary and measures definitions	Data Value Creation							
4	Current size of in-scope data repositories and growth trend by quarter for last 8 quarters	Future-Proof Infrastructure							

Track the date each data request was submitted to the data aggregator for project management purposes

Use this column to add comments about the file (either from the assessment team or from the data aggregator staff)

Prior assessments have revealed that requesting a reporting systems landscape is particularly helpful in understanding the current state of the data aggregator organization

Some data requests will not be able to be fulfilled by the data aggregator; in this case, requests can be answered during interviews and others may not be fulfillable because the data aggregator's maturity is low for that design principle

After the data request is fulfilled, indicate what the file name is in this column for traceability purposes

# DATA REQUEST | FILE ANALYSIS

*Use the file analysis tool to analyze data request submissions, summarize content, create hypotheses, brainstorm follow up questions, and answer key questions.*

Denote the related line of the data request tracker is fulfilled by this file

Note any key insights that are gained based on the review of the provided data request file

High-level description of the contents of the file

Indicate any questions the assessor has for the data aggregator employee that provided / is responsible for the file submitted

File Analysis								
#	Data Request Line	File Name	Relevance / Insightfulness	Insights / Hypotheses	Overview	Next Steps	Questions for Organizational Stakeholder	Comments
	Reporting Systems Landscape 1) List of business systems (enterprise applications) which support key reporting functions	File_Name_ABC_DEF	1 - High	Organization has a patchwork of applications, each built for a single purpose, with likely no integration or coordinating between them	Catalog of 140 applications: 98 flagged as in scope	Capture additional attributes such as "Data Collection is the Primary Purpose (T/F)" and "User Category" in order to inform application landscape and general understanding		

Reference the file name that is being analyzed in a particular row. The file name should reference where the file is stored on the central, shared file repository

Prior assessments have revealed that some files provided will not be as relevant to the assessment than others; use this column to denote which files are the most helpful to streamline data gathering by the assessment team

Track next steps that arise from the file submission in this column for project management purposes (e.g., scheduling interviews with key stakeholders, additional analysis to be completed)

Use this column to add comments about the file

# INTERVIEW GUIDE | OVERVIEW

Playbook Element Overview
<p><b>Objective:</b> To provide sample question sets for both internal assessed organization staff and external stakeholders; questions are tied to the Assessment Framework</p> <p><b>Target Audience:</b> Individuals assessing target organization</p>
Format of the Element
<p>Word document that demonstrates the connection between the assessment framework and sample interview questions and contains the following key sections:</p> <ul style="list-style-type: none"><li>• <i>How to Guide:</i> Instructs users on how to use the interview guide and the limitations of the tool</li><li>• <i>Diagnostic Questions:</i> Lists questions to ask key stakeholders in order to help direct assessment focus and goals</li><li>• <i>Interview Warm-Up Questions:</i> Demonstrates sample questions to ask stakeholders when beginning an interview</li><li>• <i>Sample Interview Questions:</i> Lists sample questions to ask stakeholders by design principle, assessment criteria, and interviewee type</li><li>• <i>Sample Voice of the Customer Questions:</i> Compiles external stakeholder interview questions into one page for developing Voice of the Customer and User Persona development</li></ul>
How to Use the Element
<ul style="list-style-type: none"><li>• Based on Assessment Framework areas selected, identify interviewee types to be engaged</li><li>• Identify specific interviewees &amp; schedule interviews</li><li>• Review interview guides and identify highest priority questions to be answered</li><li>• Conduct interviews and document responses</li></ul>
Dependencies on Other Playbook Elements
Dependent on the Assessment Framework

Relevant Assessment Framework Principles
<ul style="list-style-type: none"><li>• All, data request submitted to client will depend on objective of assessment</li></ul>
<p>The diagram illustrates the 'Modernized State Data System' as a pyramid with three levels: Foundational, Operational, and Optimal. The Foundational level includes four pillars: Secure By Design (Data encryption, Separation of PII data, Data security &amp; privacy, Access control), Data Availability (Source data availability, Data points coverage, Data quality &amp; recency), Reliable &amp; Scalable (Disaster recovery, System availability &amp; fault-tolerance, System scalability), and Customer Usability &amp; Accessibility (Data accessibility, Customer self-service, Metadata findability and usability, Data visualization). The Operational level includes three pillars: Future-Proof Infrastructure (Modular data pipeline, Modern databases with extensible schema), Minimal Movement and Duplication (Query data in place at source, Data &amp; integration architecture, Data duplication), and Customer-Centered Design (Customer segments understanding &amp; prioritization, Customer needs / requirement solicitation). The Optimal level includes two pillars: Continuous Improvement Ready (Roles and responsibilities, Success and efficiency measures, Automated data pipeline, Business process support) and Optimized Customer Experience (Customer feedback incorporation, Data model usage versus intent, Service and product management, Data producer feedback). Below the pyramid is a horizontal bar for 'Data Value Creation' with stages: Collection, Enrichment, Governance, Strategy, and Insight.</p>
Key Inputs
<ul style="list-style-type: none"><li>• Understanding of assessment goals</li><li>• Identified interviewees from:<ul style="list-style-type: none"><li>▪ Assessed organization</li><li>▪ Key external stakeholders</li></ul></li></ul>

# INTERVIEW GUIDE | SAMPLE ARTIFACTS

Use the interview guide to frame and refine assessment purpose, identify key stakeholders to interview, and select sample questions to leverage for stakeholder interviews.

## Assessment Framework

## How to Use the Tool

## Diagnostic Questions

## Sample Interview Questions

**Assessment Framework / Guidance**

The Assessment Framework provides a guide for evaluating a data ecosystem grounded in nine key design principles. The framework is intended to be used by organizations conducting stakeholder assessments and organizations in the process of designing new data systems.

**Design Principle Definitions:**

Design Principle	Definition
<b>Data Value Creation</b>	The process of collecting data, transforming it to answer researcher, practitioner, and parent questions, and effectively providing it to end users.
<b>Secure by Design</b>	The system provides a distributed and virtual public good of information limited to secure, permissioned, and appropriate data.
<b>Data Availability</b>	Data sets are in a readily accessible granular acceptable use and authorization.
<b>Customer Usability and Accessibility</b>	Information has sufficient discoverability and is designed to grow to accommodate future use cases.
<b>Future-Proof Infrastructure</b>	High-quality, timely, relevant data is made available in a user-friendly format.
<b>Minimal Movement and Duplication</b>	Modular, extensible infrastructure design enables future use cases.
<b>Customer-Centered Design</b>	Data movement is minimized to storing upstream with minimal duplication and is relevant to state and user needs.
<b>Continuous Improvement Ready</b>	Researcher, practitioner, and parent questions drive system and reporting design.
<b>Optimized Customer Experience</b>	Organization is focused on reducing time-to-value for research & innovation.

Design principles are also organized into maturity levels: foundational, operational, and optimal.

- Foundational principles** relate to the basic operations, infrastructure, and customer orientation that an organization may have. These tasks are the basic needs that must be fulfilled to have a secure, functional organization (e.g., defined processes, disaster recovery, basic data availability). Without these tasks, organizations will have difficulty implementing operational or optimal principles effectively.
- Operational principles** relate to elements that must allow organizations to function more effectively. These tasks are the elements that must be fulfilled to ensure the organization provides targeted data and analysis for the foreseeable future. Without these tasks, organizations will not be able to implement optimal principles effectively.
- Optimal principles** focus on operational practices that relate to continuous improvement and ongoing refinement of organizational processes, and services. These principles allow an organization to adjust its processes and services to address leading questions in the P-2036 vision.

**How to Use this Tool**

To use the interview guide:

1. Identify a single Data Aggregator to assess
2. Review the Assessment Framework and understand the definitions of each design principle
3. Identify 1-2 internal stakeholders (a technical and operational stakeholder) to conduct diagnostic interview with (see Diagnostic Questions section below)
4. Select design principles to focus the assessment on based on preliminary diagnostic interviews
5. Design custom interview guides, leveraging the sample interview questions for selected design principles (see Sample Interview Questions sections below)
6. Identify key internal and external stakeholders to be interviewed
7. Schedule and conduct detailed interviews with internal and external stakeholders

**Key Terms**

**Data Aggregator**  
An organization who collects, processes, stores and provides state data to guide research, legislation, policymaking, teaching practice, and/or other decision-making.

**State Data**  
Includes education data (Pre-K, K-12, post-secondary) as well as other state constituent data (e.g. workforce, transportation)

**Internal Stakeholders**  
Internal stakeholders belong to the Data Aggregator being assessed.

Stakeholder Type	Description
<b>Internal Operational</b>	A business or operational employee of the Data Aggregator. Understands data strategy, data governance, customer service, and product management processes.
<b>Internal Technical</b>	An IT or other technical employee of the Data Aggregator. Understands the system infrastructure, system security, data storage practices, data collection, data transformation and other technical design and process details.

**External Stakeholders**  
External stakeholders are providers or consumers of data from the Data Aggregator being assessed.

Stakeholder Type	Description
<b>External (upstream) / Data Provider</b>	Organizations who send data to the Data Aggregator. These organizations can be aggregators themselves (e.g. aggregator of higher education data) but in this role are sending the data they generate or collect to the Data Aggregator.
<b>External (downstream) / Data Consumer</b>	Organizations or individuals who want to access data and information from the Data Aggregator. These can be, for example, researchers, governance boards, policymakers, legislators, students or parents

**Interview Warm-Up**

Interviews are a great place to gather detailed information. Using broad, open-ended questions often leads to details and additional questions that more targeted questions might miss. Below are some suggested "warm-up" questions to ask at the beginning of an interview.

**Sample Interview Questions:**

1. Please tell us about your current role?
2. How do you currently engage with the Data Aggregator?
3. What are your objectives for the day? What data do you use the most?
4. How does your organization interact?

**Diagnostic Questions**

The Diagnostic Questions are designed to be the focus of a more intensive assessment. The areas of the Assessment Framework should be quick high-level/summary evaluation of the assessment isn't feasible. The Diagnostic Questions are designed to be used in order to effectively utilize the Diagnostic Questions.

**Example Usage:**

**Interviewer Question:** Are there any data collection tools?

**Internal Operational Stakeholder Answer:** We take throughout their postsecondary education we are unable to add more data points. Our way the system works just doesn't allow us to we have never done it.

Using this type of response, an assessor should Value Creation design principles.

Because both principles are foundational, the foundational principles and not assessing optimal Customer Experience).

**Diagnostic Questions (See Sample Interview Questions section for additional details):**

Design Principle	Diagnostic Questions
<b>Data Value Creation</b>	1. Describe your data governance process. 2. Provide an overview of your current overall strategy and roadmap. 3. What is your perspective on internal and external constraints you face to accomplish your mission? 4. How do you envision data collected from data contributors? 5. Describe the value of the data you receive from the Data Aggregator.
<b>Secure by Design</b>	1. Tell us about your data security processes. 2. What are your highest security challenges? 3. How do you balance the conflicting needs of data privacy and providing broad access to data?
<b>Data Availability</b>	1. Tell us about your data collection process. 2. Tell us about your approach for including data and insights from adjacent sectors (e.g., other levels of education, non-education sectors)? 3. Are there any data sources that you think should be added to your data collection? Why?
<b>Customer Usability and Accessibility</b>	1. What is your perspective on the overall health of the infrastructure? 2. How have there been any external system outages in the recent past? 3. How do you ensure your customers access data and insights? 4. What are some challenges or opportunities for improvement in how customers access data and insights? 5. Tell us about the process of accessing data. What are some challenges you face? What are opportunities for improvement?
<b>Future-Proof Infrastructure</b>	1. Tell us about your process to manage inbound data structure changes. How do you maintain flexibility? 2. How old is your technology stack and versions? Is any hardware or software outside maintenance period?
<b>Minimal Movement and Duplication</b>	1. Tell us about the flow of data from sources to your system? Are there any areas that require manual effort? 2. What is your perspective around data access challenges?
<b>Customer-Centered Design</b>	1. What are your processes for understanding your customer base (e.g., customer needs, segmentation, prioritization, etc.)? 2. How well do the Data Aggregator's current data and reporting capabilities meet your needs? 3. How well do the Data Aggregator's current data and reporting capabilities meet your needs?
<b>Continuous Improvement Ready</b>	1. What is your approach towards improving efficiency and quality of your processes?
<b>Optimized Customer Experience</b>	1. Tell us about your process for engaging with external stakeholders to understand their needs and feedback? 2. How do you prioritize new data collection and feature improvements? 3. Is there a process for providing feedback to the Data Aggregator?

**Sample Interview Questions**

**Data Value Creation**  
The process of collecting data, transforming it to answer researcher, practitioner, and parent questions, and effectively providing it to end users.

**Diagnostic Questions**

Diagnostic Question	Target Interviewee
Please describe your data governance process.	Internal Operational
Can you provide an overview of your current overall strategy and roadmap?	Internal Operational
What is your perspective on internal and external constraints you face to accomplish your mission?	Internal Operational
How do you envision data collected from data contributors?	Internal Operational
How useful do you think the data you provide is to consumers?	Internal Operational
Can you describe the value of the data you receive from the data aggregator?	External (downstream)

**Assessment Criteria: Strategy**

Target Interviewee: Internal Operational

**Sample Interview Questions**

Have you identified and staffed key roles responsible for data strategy and roadmap development?

Do you have a documented data strategy? Please share current strategy documentation.

Is your data strategy aligned with customer needs?

What are the primary objectives / most important outcomes of your data collection and/or reporting?

Are there any reporting, analytics and/or research requirements that have not yet been fulfilled (collection, data reporting, etc.)? If so, what are they?

**Assessment Criteria: Governance**

Target Interviewee: Internal Operational

**Sample Interview Questions**

Have you identified and staffed key roles for data governance? Is there a governance body in place that manages any changes?

Have you established internal policies, processes, and trainings for data governance?

Do you review and update the policies and processes periodically or on change in legislation or emergence of compliance risk?

Target Interviewee: Internal Technical

**Sample Interview Questions**

Do you follow available national data standards?

Do you have established processes for master data management (identity, organizations, courses, etc.)? Please specify.

What works well with the governance model? What does not work so well?

Assessment framework / guidance section allows users to understand how the assessment framework integrates with the interview guide

The how-to guide orients users to the interview guide, how to implement diagnostic questions, and identify key stakeholder types to interview based on the assessment

Diagnostic questions are a brief set of open-ended questions to be used to understand and focus priority assessment areas

Sample interview questions to inform interviews for individualized assessments. Includes warm-up questions and Voice of the Customer questions

# USER PERSONAS, USE CASES, & VOICE OF THE CUSTOMER | OVERVIEW

## Playbook Element Overview

**Objective:** Provides a simple way to profile and categorize external customer feedback into key themes. Used to identify strengths and opportunities for further analysis or inform solution design

**Target Audience:** Assessed organization leaders/operators

## Format of the Element

PowerPoint templates, fully incorporated in this playbook:

- *Persona Summary*: a starting set of high-level strategic personas
- *Persona Template*: Identifies levers for what characterizes or constrains each external stakeholder type (e.g., pain points); includes example content for guidance
- *Use Cases Template*: Includes key characterizing research questions or other uses of the assessed organization's data; includes example content for guidance
- *VoC Summary Template*: Identifies strengths and opportunities by key analysis area
- *What We Heard Template*: Presents direct quotes from customers to understand key pain points and areas of success for the data aggregator

## How to Use the Element

Based on information collected through the interview process:

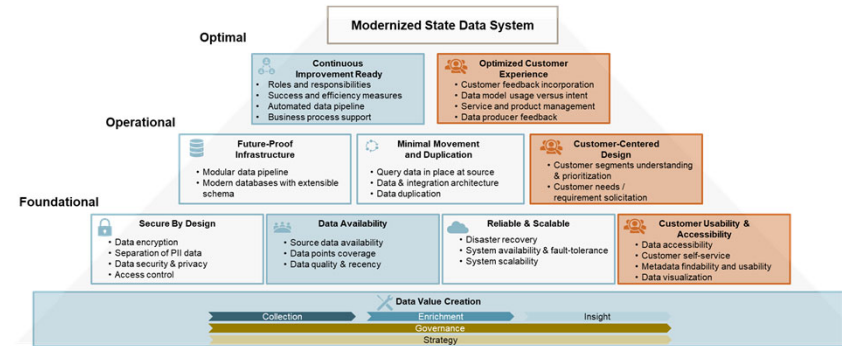

- Summarize interview responses by customer type as exemplified by the user personas
- Identify common research questions or other data use cases identified by stakeholders
- Identify key themes, strengths, and opportunities
- Select key quotes from interviews to present in 'what we heard'
- Highlight common pain point and opportunity areas for review

## Dependencies on Other Playbook Elements

Informed by the Assessment Framework and the Interview Guides; deliverables can be built around individual Personas depending on how many interviews are conducted

## Relevant Assessment Framework Principles

- Customer-centered design, customer usability & accessibility, optimized customer experience, continuous improvement read, data availability, and purposefully-linked data

## Key Inputs

- Understanding of customer landscape and priorities
- Stakeholder interviews with:
  - Data aggregator leader/operator (to direct which providers / consumers should be targeted)
  - Data providers/consumers business leaders/operators
  - Data providers/consumers technical SMEs

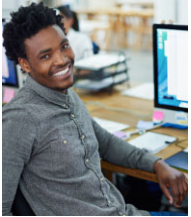

## PERSONA SUMMARY | STATE DATA AGGREGATOR EXAMPLES

*While there may be additional personas developed through a specific assessment, the following list represents a common set of stakeholders that are of interest in an assessment of a Data Aggregator. This list can be used as a starting place.*

Persona	Key Objectives
Greg, Researcher	<ul style="list-style-type: none"> <li>• Conduct research on education topics, including policies, practices, interventions and innovations</li> <li>• Study relationships between education practices &amp; impact</li> <li>• Provide research to policymakers and practitioners to improve educational outcomes for all students</li> </ul>
Carl, Advocacy Organization Lead	<ul style="list-style-type: none"> <li>• Build and share evidence for interventions and solutions that work to help close the postsecondary achievement gap for black and Hispanic students</li> <li>• Help funders and influencers better understand the barriers to student success for specific student populations at the postsecondary level</li> <li>• Empower students to find an education and career path that fits their needs</li> </ul>
Lina, Community College President	<ul style="list-style-type: none"> <li>• Ensure stable or increasing revenue to support campus programs and operations</li> <li>• Grow enrollment, in line with the growth of the community</li> <li>• Provide each student with the opportunity and support to earn a degree of value in the workplace</li> <li>• Be recognized as a leading institution amongst her peers</li> <li>• Serve to improve the local community by working with students, businesses, and local leaders</li> </ul>
Alex, Head of Campus Advancement – Rural Community College	<ul style="list-style-type: none"> <li>• Provide timely insights to campus team to inform strategic and operational decisions, including decisions that will impact enrollment and student outcomes</li> <li>• Provide evidence of success so that there is a value story to partners and funders (for new programs, athletics, employer pipelines, etc.)</li> <li>• Build a culture of data use amongst the college leadership team and decision-makers</li> <li>• Improve internal reporting accuracy and efficiency / reduce time spent on lower-value add data efforts</li> </ul>
Theresa, Institutional Researcher	<ul style="list-style-type: none"> <li>• Use modeling and analytics to identify trends in student growth inside and outside of the state, with details that will enable the system to better position and invest across all campuses</li> <li>• Oversee development of reports that provide a full and evolving view of performance across their varied group of schools in the system.</li> <li>• Identify insights to drive innovative programs and solutions for student success that are impactful and recognized as leading in the field (among peers, leadership team, prospective students and families)</li> </ul>
Anyia, Policy Lead, Government Executive Office	<ul style="list-style-type: none"> <li>• Understand impacts of constituent interactions with state services</li> <li>• Use aggregate data to construct policy and funding decisions</li> <li>• Understand links between education, foster care, criminal justice, and social services and outcomes</li> <li>• Optimize state spend across all programs</li> </ul>

# PERSONA TEMPLATE | *PERSONA TYPE* | *PERSONA NAME, ROLE*

PERSONA TEMPLATE   <i>PERSONA TYPE</i>   <i>PERSONA NAME, ROLE</i>		
Key Objectives	<ul style="list-style-type: none"><li>• Conduct research on education topics, including policies, practices, interventions and innovations</li><li>• Study relationships between education practices &amp; impact</li><li>• Provide research to policymakers and practitioners to improve educational outcomes for all</li></ul>	<p>Name individual personas based on jobs individuals do, the places they work, and objectives they have in interacting with the Data Aggregator</p> <p>Use unique photos for each persona to help readers to personalize the content</p> 
	<p>Major Pains / Limitations for Data</p> <ol style="list-style-type: none"><li>1. Limited capacity to match and connect different state data sectors</li><li>2. Limited access to longitudinal data</li><li>3. Access to data after it is requested is slow (6-12+ months)</li><li>4. Data sharing agreements for each research request are customized, requiring significant time and effort</li><li>5. Identify key pain points that this persona-type has today. Focused on interactions with the Data Aggregator</li></ol>	<p>Data Needs / Wants</p> <ol style="list-style-type: none"><li>2. Raw data, easy to download in order to manipulate and support a story of student needs</li><li>3. A clear understanding or documentation of data collection and cross-sector linking methodologies in order to defend research and conclusions</li><li>4. Data provided on a timely basis to maintain the timelines on research and grant projects</li></ol> <p>Summarize opportunities for improvement that were discussed during Voice of the Customer interviews for this persona. Focused on interactions with the Data Aggregator</p>

# STRATEGIC USE CASE TEMPLATE | ORIENTATION

*This template provides a structure for summarizing uses of state data; developed use cases can be more or less detailed based on the assessment. The use cases can be mapped to specific user personas to ensure there is linkage among assessment findings.*

Use Case A: Provide better linkages and longitudinal views	
<p><b>Success scenario:</b> a user is able to easily navigate purposefully-linked, g types and levels of institutions and the workforce, in order to support their pathways to a degree of value.</p> <p><b>For example: I want to...</b></p> <ol style="list-style-type: none"> <li>1) I want to student s generatio</li> <li>2) I want to education debt by students type and pathway against my peers so I can make adjustments and share the value story with funders</li> <li>3) I want to know what happened to the students who transferred from my institution: with information on their paths (time to completion, degree, etc.) and outcomes, so I can adjust services and strengthen connections and alignment to other institutions</li> <li>4) I want to know the background (high school, test scores, prior college experience, etc.) of the students who have succeeded or dropped out of success</li> </ol>	<p>Use case names summarize the end objective that any individual or organization may have for the Data Aggregator's services</p> <p>Highlight the optimal outcome of this use case. Success scenarios are not current-state summaries, but an ideal customer interaction</p> <p>Provide quotes collected through the interview process to bolster evidence of what customers want / need when it comes to particular use cases</p> <p>Identify key examples of why individuals or institutions would use this use case to provide specific concepts to evaluate the needs and wants of various personas.</p> <p>"We want more statewide high school data. We want more dual credit information, what high schools they came from, etc. WE want to push the agreement between data aggregators to do more, which can help solve the issue of matching." - Community College IR Lead</p> <p>"Create a transfer student report. Right now I have to piece together on my own with NSC data. This would be really helpful to the community colleges of the state." - Community College IR Lead</p> <p>"We are pulling together pieces of information instead of having one source of truth. I spend so much free time pulling common data sets to help educate my team on where and how..." - Large University, IR Lead</p>

## USE CASE EXAMPLES

*While there may be additional use cases developed through a specific assessment, the following list represents a common set of use cases that are of interest to a Data Aggregator. This list can be used as a starting place and completed use case templates for each are included in the Appendix.*

Case	Description	Success Scenario
A	Provide better linkages and longitudinal views	A user can easily navigate purposefully-linked, granular data about students who move across types and levels of institutions and the workforce, in order to support their institution's role in better, more efficient pathways to a degree of value.
B	Support continuous improvement	High quality data is provided more frequently and at a granular level that allows institutions to evaluate performance across their cohort to identify patterns in programs and initiatives that produce quality student outcomes. Data aggregator understands institutional needs and proactively provides guidance when they find evidence of things that are working.
C	Collaborate and share strategic insights	The data aggregator leverages their central role and statewide view to act as a connector and strategic partner to support institutions that are looking for data-driven insights, best practices and projections.
D	More easily fulfill state and federal reporting requirements	There are newer, better processes for submitting data to the data aggregator supported by defined change management practices that include user feedback. Users have access to some data prior to state-wide certification.
E	Use demographic and financial aid details for analysis	To better align with state goals, users need to access more detailed data, and in particular demographic details to support equity and financial aid data to understand and control education costs.
F	Perform better forecasting	By providing users access to richer data, more frequently and proactively, the data aggregator recognizes and supports predictive analytics and innovative modeling approaches that users have adopted
G	Answer strategic policy questions	Rich, linked data is more easily accessible to a broad number of users, tied to real business decisions that need to be made as well as to policy insights and decisions
H	Understand and measure educational outcomes	A user can access and utilize linked, granular data about various entities (e.g., students, institutions from Pre-K to the workforce, teachers, etc.), in order to understand the impact of different variables on educational outcomes to understand the success of educational programs and policies.
I	Assess programmatic outcomes	A user can understand the impact of different variables on a constituent's life journey and programmatic outcomes of select state services and policies via access to linked, granular data about various entities (e.g., students, constituents, state sponsored programs, etc.).

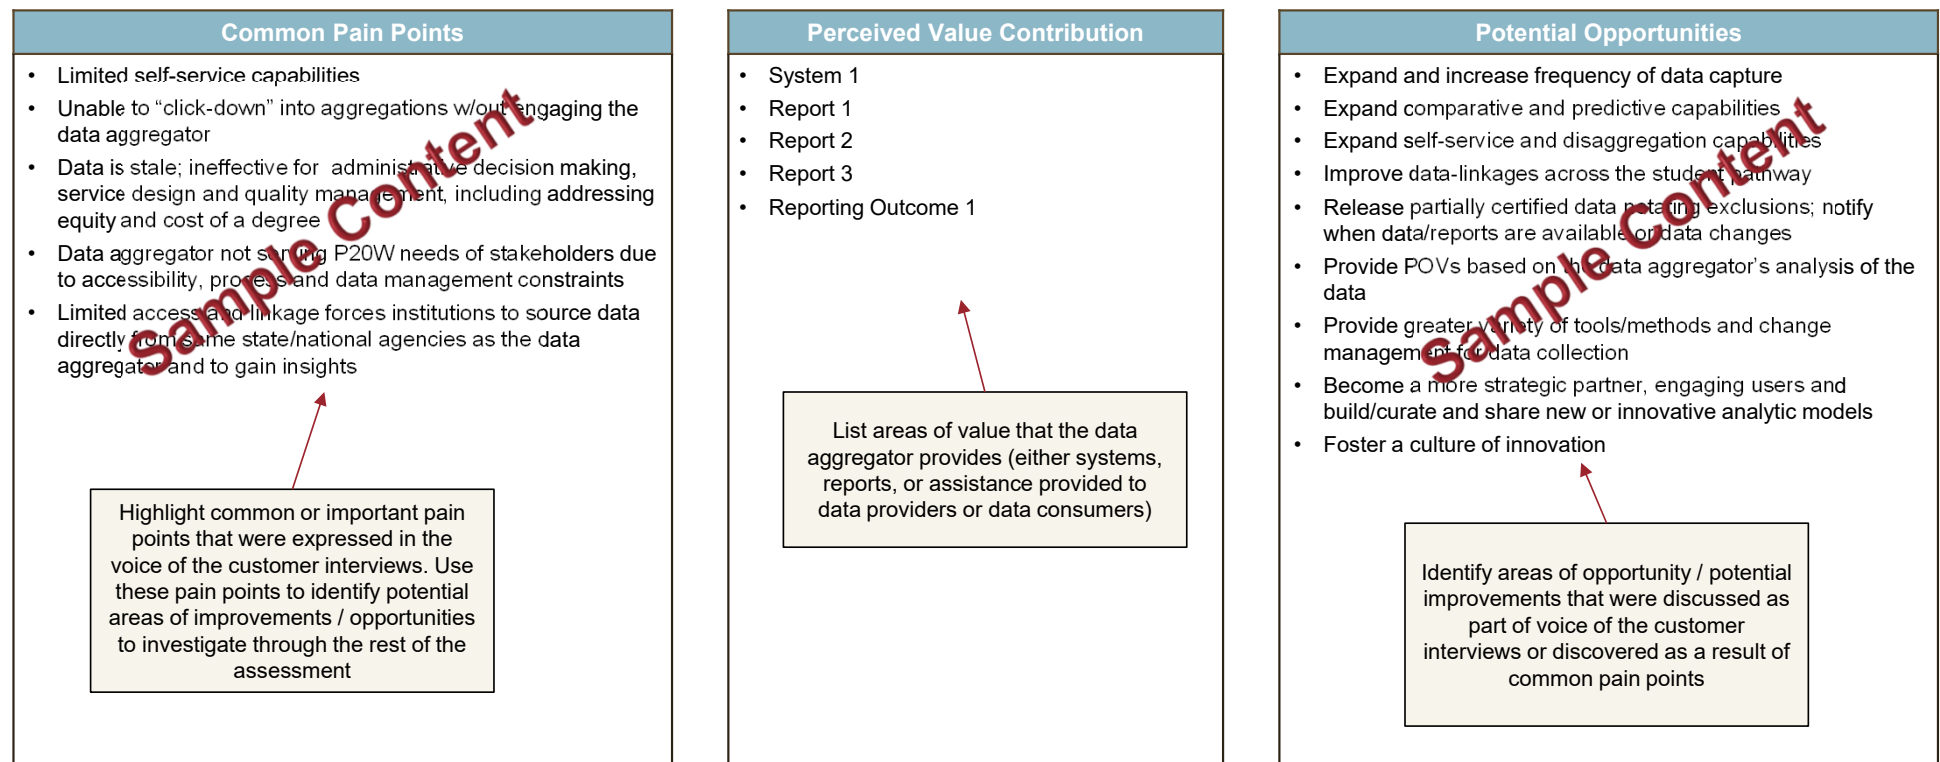

# VOICE OF THE CUSTOMER TEMPLATE | ENGAGEMENT SUMMARY

*Summarize the assessment approach and stakeholder engagement results using this template.*

Stakeholders					Approach	
<p>Indicate what types of stakeholders were interviewed as part of the assessment (add or remove as appropriate)</p>					<p>Not all stakeholder types need to be interviewed. Stakeholder groups are selected based on assessment priorities</p>	<p>Summarize how stakeholders were chosen to be interviewed and the format of interviews.</p>
<p>Institutional Researcher</p>	<p>Advocacy Org.</p>	<p>Advocacy Researcher</p>	<p>Policymaker / Lawmaker</p>	<p>Students / Parents</p>	<ul style="list-style-type: none"><li>Stakeholder mix defined by data aggregator</li><li>Curated questions by stakeholder type</li><li>Facilitated succinct 30 to 60-minute interviews</li><li>Compiled, categorized input into major themes, anchored to assessment framework</li></ul>	
<p>Total Interviewed</p>	<p>Total Interviewed</p>	<p>Total Interviewed</p>	<p>Total Interviewed</p>	<p>Total Interviewed</p>		
<p>List Stakeholder Orgs. Here</p>	<p>List Stakeholder Orgs. Here</p>	<p>List Stakeholder Orgs. Here</p>	<p>List Stakeholder Orgs. Here</p>	<p>List Stakeholder Orgs. Here</p>		
<p>List stakeholder organizations here to provide context to readers</p>						

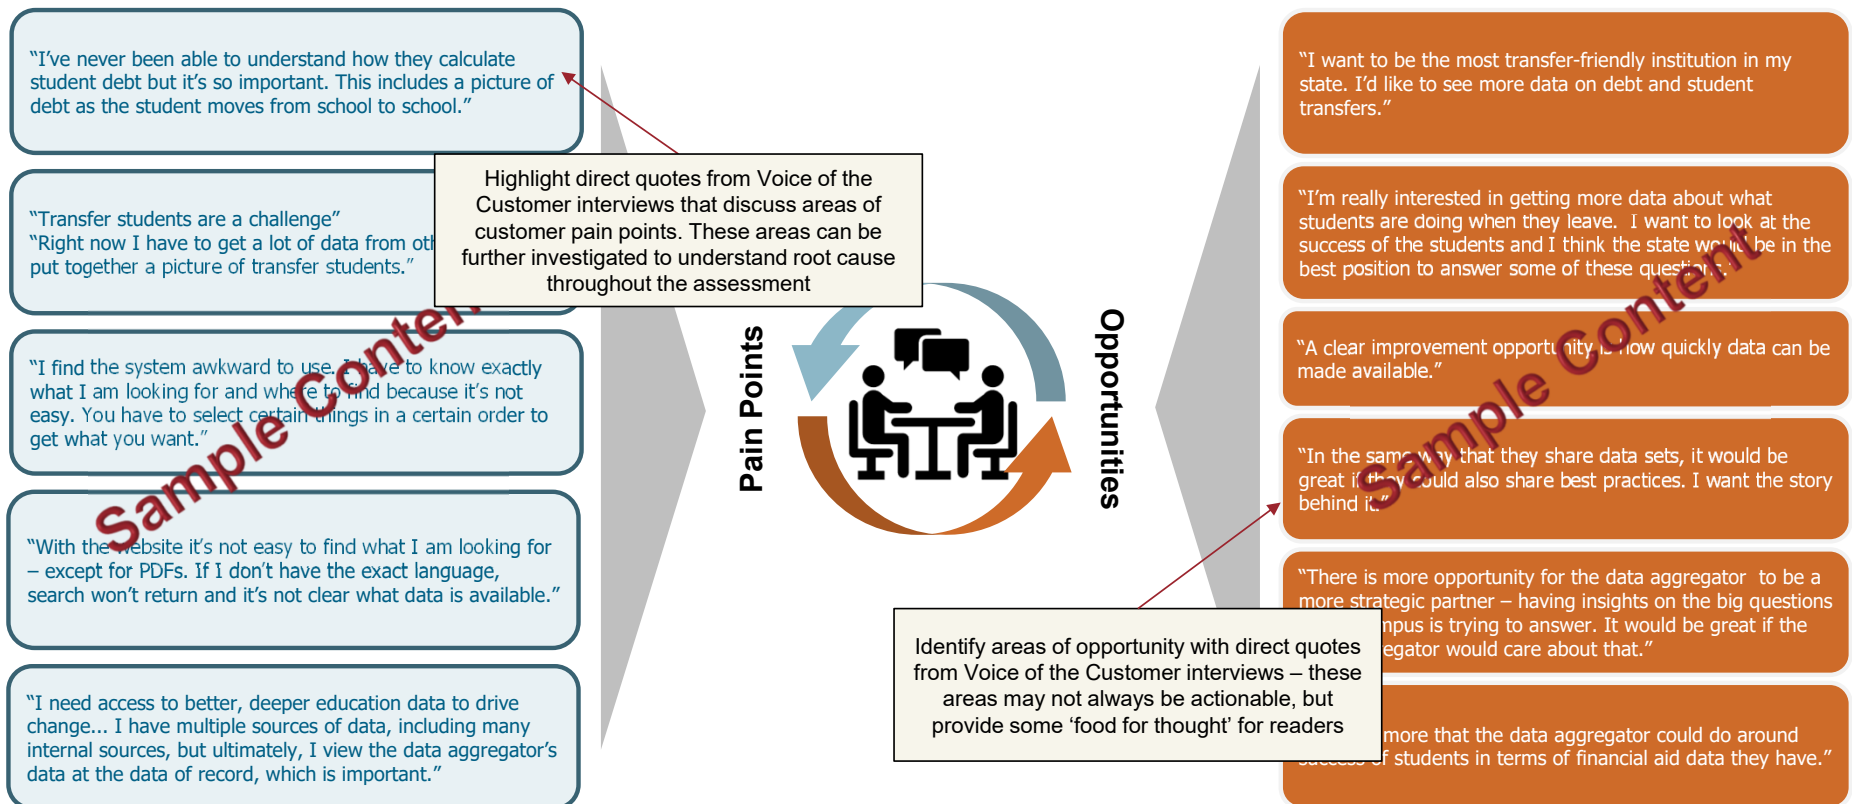

# VOICE OF THE CUSTOMER TEMPLATE | VOC SUMMARY

*Summarize the stakeholder feedback and opportunities for improvement at a high level here.*

# VOICE OF THE CUSTOMER TEMPLATE | PAIN POINT & OPPORTUNITIES

*Include compelling quotations gathered through the stakeholder interview process, especially those that represent common feedback, here.*

# SYSTEMS ARCHITECTURE | OVERVIEW

## Playbook Element Overview

**Objective:** Outlines data flow, key systems, and interface points in order to visualize system or data flow inputs, processing and outputs. Understand current technology capabilities and gaps.

**Target Audience:** Technical architects and business operators at the assessed organization & potential vendors seeking to fill gaps in assessed organization's systems architecture

## Format of the Element

PowerPoint templates, fully incorporated in this Playbook

- **Business Capability Model:** a model of organizational and system capabilities and how they connect to support a modern data aggregator organization
- **System Capability Model:** model of only system capabilities and how they connect to support a modern system data pipeline – from collect through deliver / publish
- **State Systems Capabilities Evaluation:** a tool to evaluate a Data Aggregator's existing systems against the reference system architecture

## How to Use the Element

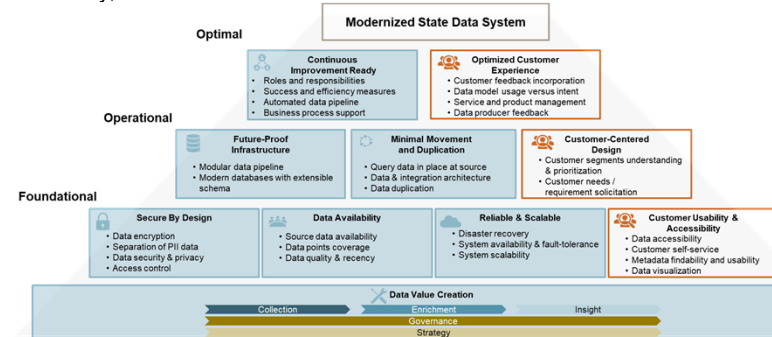

- Identify primary assessment goals
- Determine depth of system architecture element to product (e.g., stakeholder catalog, data flow diagrams, high level architecture diagram, detailed architecture diagram, etc.)
- Deploy the Data Request and conduct technical interviews using the Interview Guide
- Use information gathered to complete the Data Value Creation Evaluation tool, identifying gaps between the Data Aggregator's existing systems and the reference architecture

## Dependencies on Other Playbook Elements

Dependent on fulfillment of the Data Request, results from interviews conducted based on the Interview Guide, and the Data Value Creation principle of the Assessment Framework

## Relevant Assessment Framework Principles

- All infrastructure or operational design principles: continuous improvement ready, future-proof infrastructure, minimal movement and duplication, secure by design, data availability, and reliable and scalable

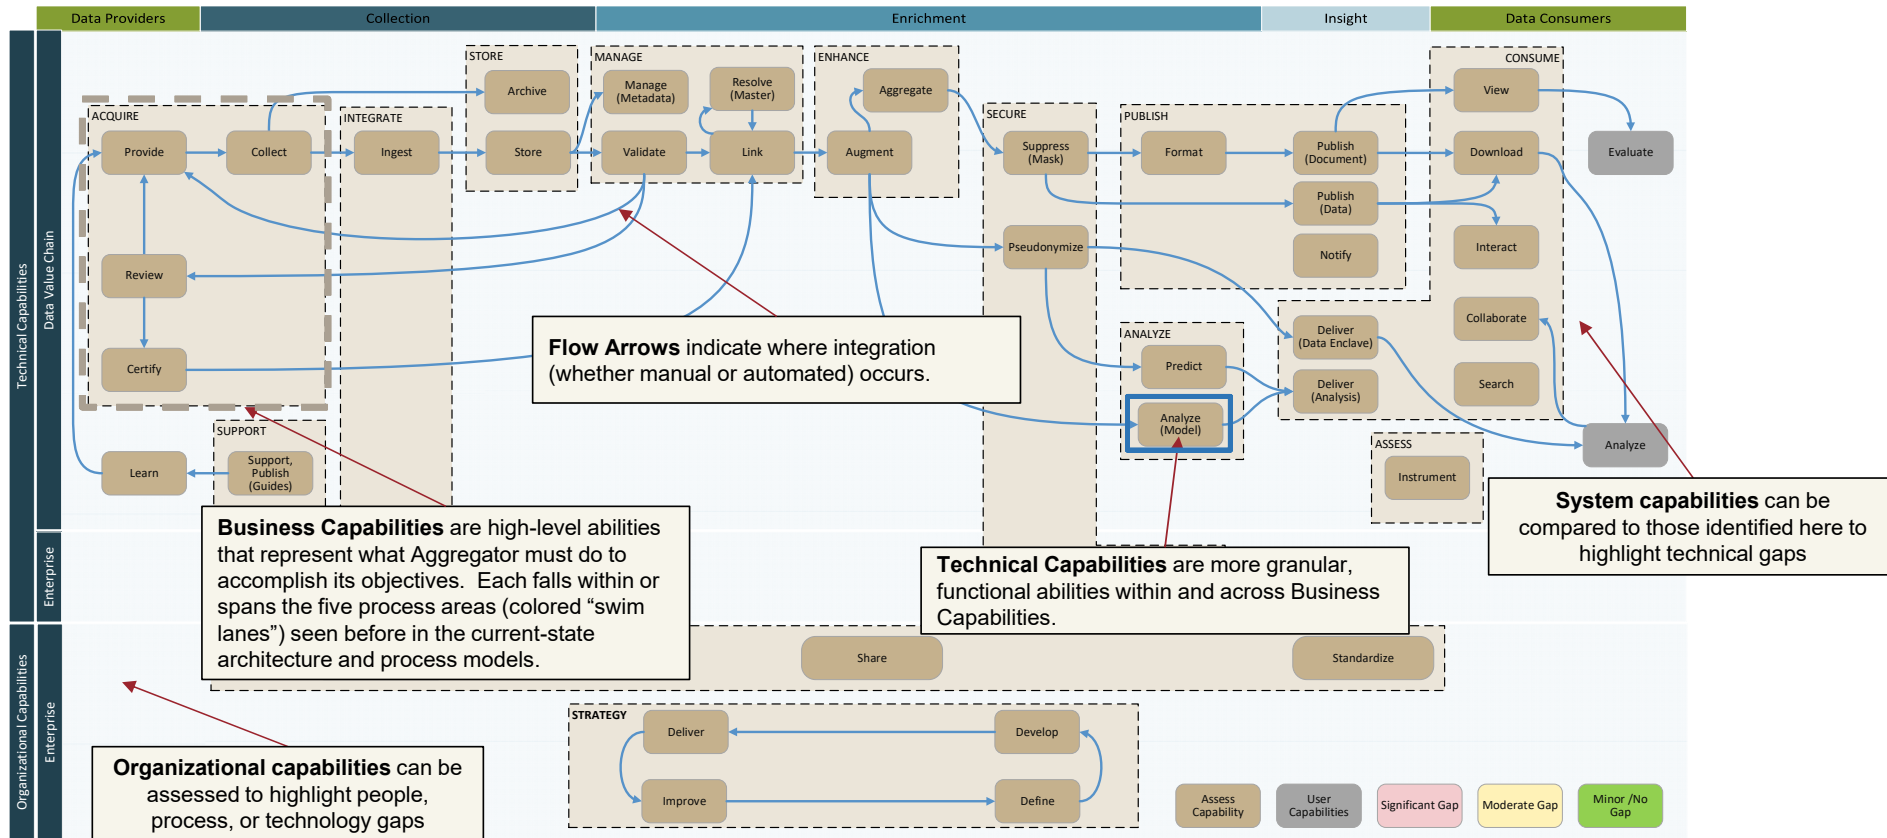

## Key Inputs

- Understanding of assessment goals
- Stakeholders interviews:
  - Technical lead at assessed organization
  - Business lead at assessed organization
  - Technical leads at customer organizations
- Data Request results:
  - Process documentation and / or systems landscape documentation
  - Systems Inventory

# BUSINESS CAPABILITY MODEL

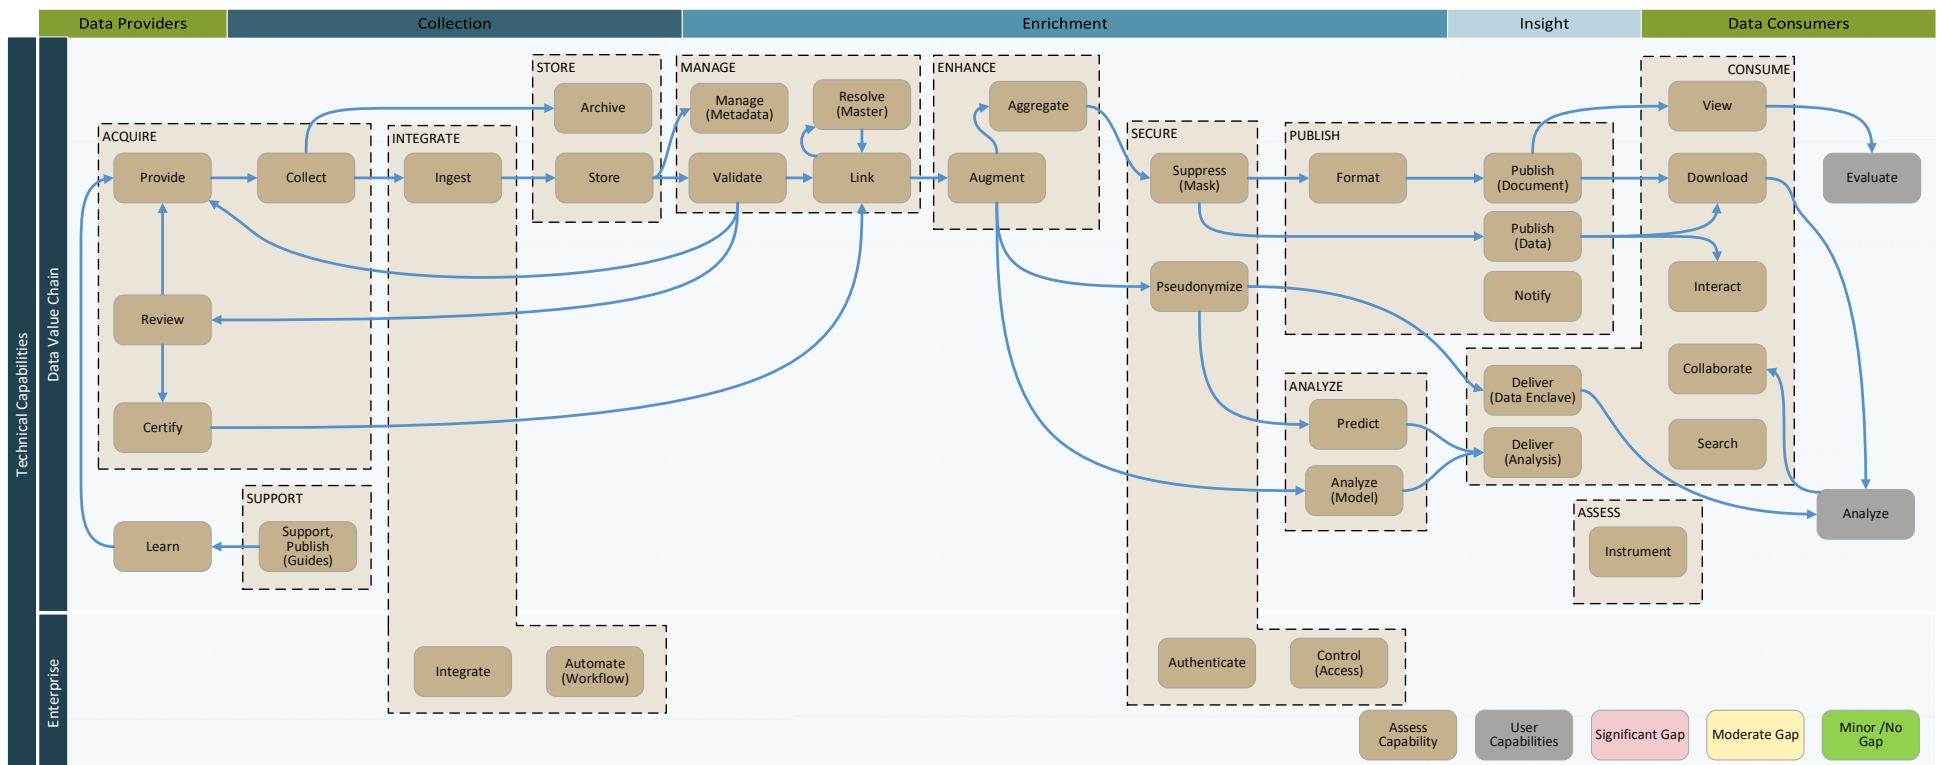

Use the Data Request and Interview responses to fill in an assessment for the Data Aggregator to compare with this sample capability model to be able to highlight gaps in due to people, process, or technology challenges.

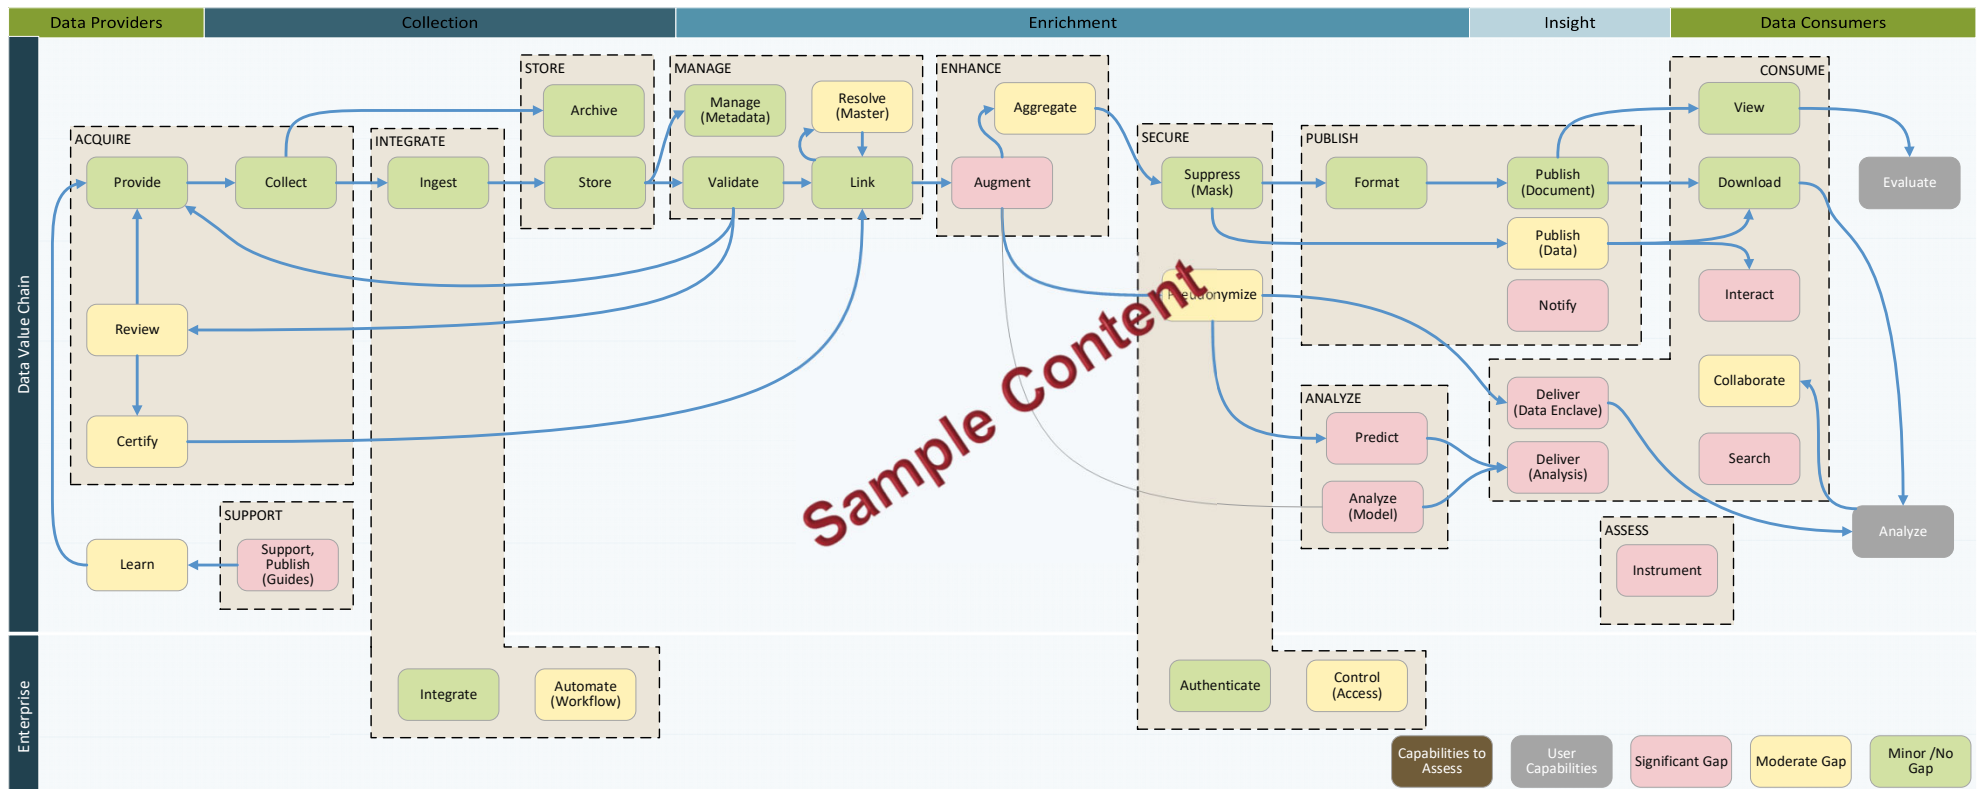

# SYSTEM CAPABILITY MODEL

*The System Capability Model is a subset of the Business Capability Model and can be used as a starting place for the technical assessment of the Data Aggregator. Use this reference capability model to highlight gaps.*

# SYSTEM CAPABILITY MODEL | ASSESSMENT EXAMPLE

Use the Data Request and Interview responses to fill in a detailed data value creation systems architecture for the Data Aggregator to compare with the sample reference system capability model to be able to highlight gaps.

# STATE DATA SYSTEMS | KEY CAPABILITIES | EVALUATION TEMPLATE

Use the Data Request and Interview responses to make an assessment of each value chain component for key capabilities

Collection			Enrichment			Insight			
Acquire	Ingest	Store	Manage	Enhance	Secure	Analyze	Publish	Consume	Support
Value Chain Component	Key Capabilities Needed					Enabling Technology		Assessment & Comments	
Acquire	• Role based, secure access for external data providers to submit data					• Identity and Access Management (e.g. Okta IAM, OneLogin) • Managed File Transfer (e.g. Tibco MFT) • API Management (e.g. Apigee, MuleSoft)			• Okta used for IAM
	• Managed, encrypted and scalable data transfer channel for data providers to submit large data files in variety of formats								• Tibco MFT platform used
	• External data pull to securely download large data files from data providers infrastructure								• Data provider is not using SFTP
	• Monitoring and notification for data transfer activities								• No monitoring of data transfer
	• API for external data providers to submit data								• No API for submitting data
Ingest	• Large volume data ingestion	Data value chain components and corresponding key capabilities for assessment of system architecture				• Data Integration Tools (e.g. Informatica)		• Informatica ETL used	
Store	• Scalable, encrypted SQL database					Typical technologies enable corresponding capabilities			Record the Aggregator's assessment and observed gaps for each capability
	• Archive source data

# FINDINGS & RECOMMENDATIONS TEMPLATES

1. Assessment Summary Findings
2. Solution Infrastructure Options
3. Vendor Evaluation Template
4. Implementation Roadmap

# SUMMARY OF ASSESSMENT FINDINGS | OVERVIEW

## Playbook Element Overview

**Objective:** Provides templates for summarizing and documenting the current state, pains / limitations, and opportunities by Assessment Framework element. Summarizes the assessed organization's ability to meet stakeholder needs for key processes.

**Target Audience:** Individuals assessing target organization

## Format of the Element

Two PowerPoint slide templates:

- *Design Principle Summary:* Documents pain points, opportunities, key activities to complete, cost, and dependencies of improvement to current state by Assessment Framework design principle
- *Data Value Creation Summary:* Maps and documents pain points and limitations through the Data Value Chain to highlight potential areas of technology, people and process investment

## How to Use the Element

- Identify primary assessment goals
- Complete all relevant current state playbook elements
- Map key information to data value creation chain and design principles
- Rate each area based on assessment framework, process ease, and customer satisfaction
- Identify pain points, challenges, and opportunities for each element
- Complete the Summary Assessment templates and review with assessed organizational stakeholders

## Dependencies on Other Playbook Elements

All current state playbook elements completed will contribute to assessment findings

## Relevant Assessment Framework Principles

- All, will depend on objective of assessment

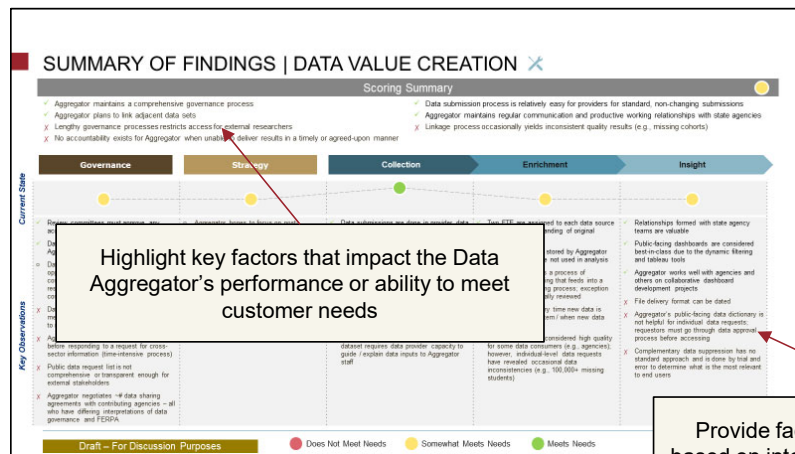

## Key Inputs

- Understanding of assessment goals
- All completed playbook current state assessment elements
- Stakeholders interviews:
  - Technical lead at assessed organization
  - Business lead at assessed organization
  - Technical and business users at data provider and consumer organizations

# ASSESSMENT SUMMARY TEMPLATES

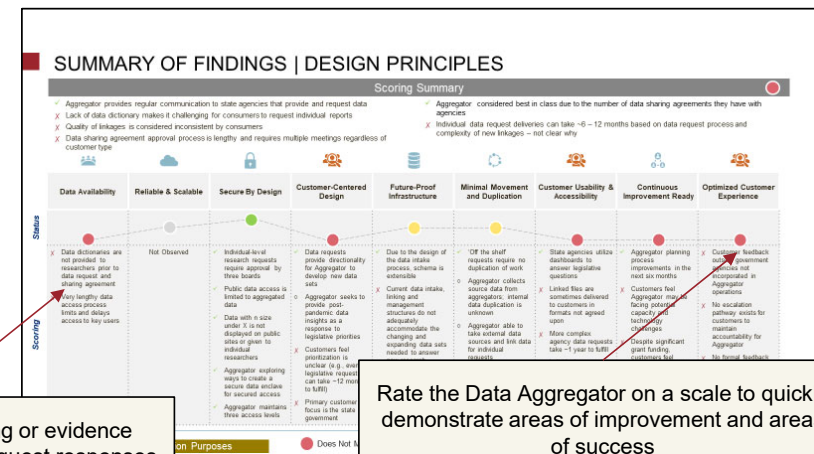

These templates provide a structure for summarizing findings from the assessment; areas of analysis can be included or excluded based on the focus of an assessment. Areas that “do not meet needs” can indicate potential improvement or investment opportunities, while areas that “meet needs” can be investigated further as best practices.

## Data Value Creation Summary

Leverage or develop a scale to rate data aggregator performance based on customer need, process efficiency, or technology integration

## Design Principle Summary

Rate the Data Aggregator on a scale to quickly demonstrate areas of improvement and areas of success

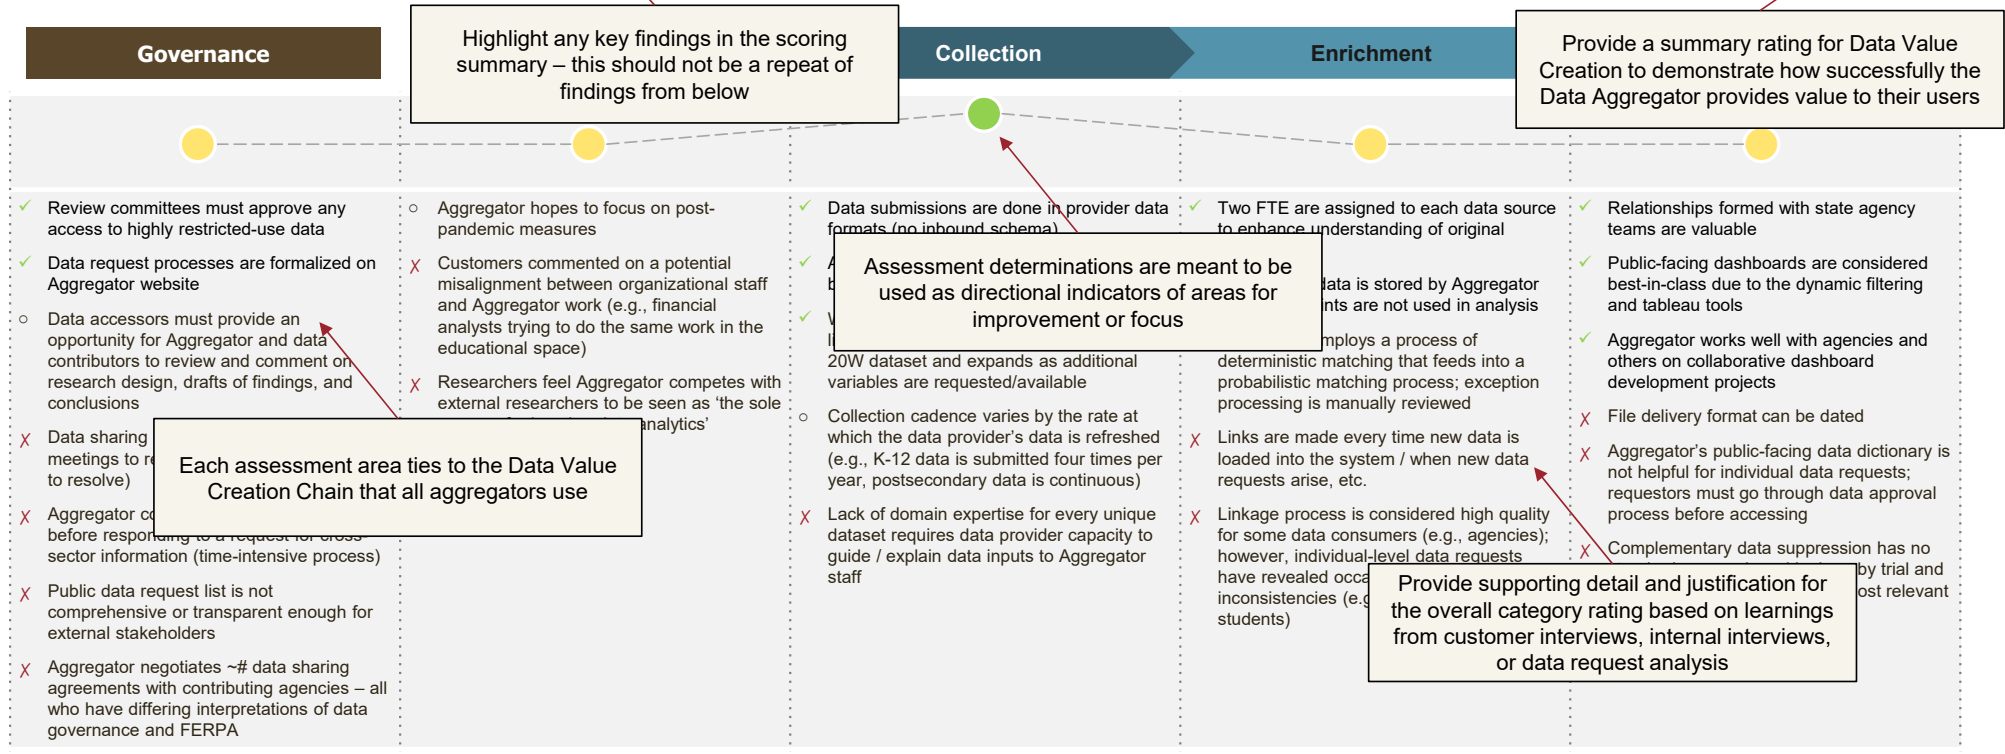

# SUMMARY OF FINDINGS | DATA VALUE CREATION ✂

## Scoring Summary

- ✓ Aggregator maintains a comprehensive governance process
- ✓ Aggregator plans to link adjacent data sets
- ✗ Lengthy governance processes restricts access for external researchers
- ✗ No accountability exists for Aggregator when unable to deliver results in a timely or agreed-upon manner
- ✓ Data submission process is relatively easy for providers for standard, non-changing submissions
- ✓ Aggregator maintains regular communication and productive working relationships with state agencies
- ✗ Linkage process occasionally yields inconsistent quality results (e.g., missing cohorts)

Current State

Key Observations

● Does Not Meet Needs ● Somewhat Meets Needs ● Meets Needs

# SUMMARY OF FINDINGS | DESIGN PRINCIPLES

## Scoring Summary

- ✓ Aggregator provides regular communication to state agencies that provide and request data
- ✗ Lack of data dictionary makes it challenging for consumers to request individual reports
- ✗ Quality of linkages is considered inconsistent by consumers
- ✗ Data sharing agreement approval process is lengthy and requires multiple meetings regardless of customer type

- ✓ Aggregator considered best in class due to the number of data sharing agreements they have with agencies
- ✗ Individual data request deliveries can take ~6 – 12 months based on data request process and complexity of new linkages – not clear why

Highlight any key findings in the scoring summary – this should not be a repeat of findings from below

Provide a summary rating for Design Principles to demonstrate how successfully the Data Aggregator delivers services

If areas were not observed – or not observed enough to provide a rating, use a grey circle to indicate that

Provide an assessment of whether detailed findings are good, bad, or neutral for the aggregator based on the rating scale developed

Customer-focused design principles may rely more heavily on findings from customer interviews than on internal discussions

	Data Availability	Reliable & Scalable	Secure By Design	Design	Future-Proof Infrastructure	Minimal Movement and Duplication	Customer Usability & Accessibility	Continuous Improvement Ready	Optimized Customer Experience
Status									
Scoring	<ul style="list-style-type: none"> <li>✗ Data dictionaries are not provided to researchers prior to data request and sharing agreement</li> <li>✗ Very lengthy data access process limits and delays access to key use</li> </ul>	Not Observed	<ul style="list-style-type: none"> <li>✓ Individual-level research requests require approval by three boards</li> <li>✓ Public data access is limited to aggregated</li> </ul>	<ul style="list-style-type: none"> <li>✓ Data requests provide directionality for Aggregator to develop new data sets</li> <li>○ Aggregator seeks to provide post-pandemic data insights as a response to legislative</li> <li>✗ Custom prioritization unclear (legislative can take ~12 months to fulfill)</li> <li>✗ Primary customer focus is the state government</li> </ul>	<ul style="list-style-type: none"> <li>✓ Due to the design of the data intake process, schema is extensible</li> <li>✗ Current data intake, linking and management structures do not adequately accommodate the</li> </ul>	<ul style="list-style-type: none"> <li>✓ 'Off the shelf' requests require no duplication of work</li> <li>○ Aggregator collects source data from aggregators; internal data duplication is unknown</li> <li>○ Aggregator able to</li> </ul>	<ul style="list-style-type: none"> <li>✓ State agencies utilize dashboards to answer legislative questions</li> <li>✗ More complex agency data requests take ~1 year to fulfill</li> <li>✗ Individual researcher requests can take X – Y months to fulfill due to a lengthy data request and linking process</li> </ul>	<ul style="list-style-type: none"> <li>✓ Aggregator planning process improvements in the next six months</li> <li>✗ Despite significant grant funding, customers feel experience has not improved</li> </ul>	<ul style="list-style-type: none"> <li>✗ Customer feedback outside government agencies not incorporated in Aggregator operations</li> <li>No escalation pathway exists for customers to maintain accountability for Aggregator</li> <li>✗ No formal feedback process exists</li> </ul>

Does Not Meet Needs

Somewhat Meets Needs

Meets Needs

# SOLUTION INFRASTRUCTURE OPTIONS | OVERVIEW

## Playbook Element Overview

**Objective:** Guides organization in making thoughtful choices about P20W infrastructure strategy by summarizing the current position of the infrastructure on a spectrum and presenting options for a desired future state

## Format of the Element

Two PowerPoint slide templates:

- *Solution Infrastructure Approach Options:* Provides framework to map vendors and technologies based on architect and build component options
- *Solution Infrastructure Guiding Questions:* Demonstrates some key questions to consider when discussing and evaluating potential groups of partners for solution infrastructure

## How to Use the Element

- Survey the vendors and technology offerings of interest as part of the future state infrastructure options
- Map solutions options by architect and build components onto the Approach Options tool
- Use the Guiding Questions to understand and determine the Data Aggregator's strategy, timeframe, and environment to select groups of solutions to further investigate based on the desired position of the end-state infrastructure on the Approach Options tool
- Assess suitability of different solution options

## Dependencies on Other Playbook Elements

- System Capability Model
- State Systems Key Capabilities Evaluation

## Relevant Assessment Framework Principles

- All, will depend on objective and scope of assessment

## Key Inputs

- Understanding of assessment goals
- Stakeholders interviews:
  - Technical lead at assessed organization
  - Business lead at assessed organization
  - Technical leads at customer organizations
- Data Request results:
  - Process documentation and / or systems landscape documentation
  - Systems Inventory
- System architecture and gaps

# SOLUTION INFRASTRUCTURE APPROACH OPTIONS

*This tool provides a structure for contextualizing current-state infrastructure and goal 'end state' solutions. The tool can be used to guide strategic conversations about organizational goals and assessment of appropriate solution options.*

Who will be the architect?	Cloud Vendor	This tool can be directionally useful for other Data Aggregators to understand infrastructure approaches but should not be used to make investment decisions without an independent solution infrastructure survey		Google, Microsoft, AWS	
	Education Analytics Capacity Builder / Solution		Education Analytics	RIPL	Coleridge / ADRF
	Development Partner		Open Source Integrator	Vendor Integrators	Cloud Channel Integration Partner
	Internal				
Legend		Which set of components should we use?			
Black Title – Example vendors, others may exist in this space		Build and Assemble Components (Custom)	Assemble Open Source Components (Apache Hadoop, Others)	Assemble Commercial Enterprise Components (SAS, Cloudera, IBM, or Oracle)	Assemble Native Cloud Components (Google, AWS or Azure)
Blue Title – Group of vendors, not vendor specific					Implement on Pre-integrated Platform

# SOLUTION INFRASTRUCTURE APPROACH | GUIDING QUESTIONS

These guiding questions support a conversation about the desired end-state infrastructure with the Data Aggregator's leadership and technical team.

## Guiding Questions

1. What are the strengths in your current infrastructure?
2. Does the current infrastructure support your organization's strategic goals and key customer needs?
3. What new capabilities would you like to enable?
4. Do you want to create your own solution or implement an existing product (collection of products)? Why?
5. How would you rate your organization's technical ability to design an improved solution?
6. How much scale does your system need for the future?
7. How much does cost impact your solution decisions for this implementation?

## Example Infrastructure Approach

Who will be the architect?	Cloud Vendor				<div>Google, Microsoft, AWS</div> <ul style="list-style-type: none"><li>Good Education Analytics Domain expertise</li><li>Contributes to ecosystem solution</li><li>Excellent support for tools</li><li>Future-proof</li><li>Low reliance on internal staff</li><li>Will require another integration partner</li></ul>	
	Education Analytics Capacity Builder / Solution		<div>Education Analytics</div> <ul style="list-style-type: none"><li>Strong Education Analytics Domain expertise</li><li>Strong Open Source Experience</li><li>High reliance on internal staff</li><li>Small organization</li><li>Custom internal solution</li></ul>		<div>RIPL</div> <ul style="list-style-type: none"><li>Strong Education Analytics Domain expertise</li><li>Existing AWS reference implementation</li><li>Contributes to ecosystem solution</li><li>Focused on AWS</li><li>High reliance on internal staff</li><li>Small organization</li></ul>	<div>Coleridge / ADRF</div> <ul style="list-style-type: none"><li>Strong Education Analytics Domain expertise</li><li>Existing AWS solution</li><li>Multi-tenant environment</li><li>Incomplete coverage</li><li>Small organization</li></ul>
	Development Partner		<div>Open Source Integrator</div> <ul style="list-style-type: none"><li>Strong understanding of specific tools</li><li>Low reliance on internal staff</li><li>Weak Education Analytics Domain expertise</li><li>Custom internal solution</li></ul>	<div>Vendor Integrators</div> <ul style="list-style-type: none"><li>Strong understanding of specific tools</li><li>Low reliance on internal staff</li><li>May require more than one partner</li><li>Weak Education Analytics Domain expertise</li><li>Custom internal solution</li></ul>	<div>Cloud Channel Integration Partner</div> <ul style="list-style-type: none"><li>Strong understanding of specific cloud tools</li><li>Can provide tactical support for Cloud Vendors</li><li>High reliance on internal staff</li><li>Weak Education Analytics Domain expertise</li><li>Custom internal solution</li></ul>	
	Internal	<ul style="list-style-type: none"><li>High reliance on internal staff</li><li>Custom internal solution</li></ul>	<ul style="list-style-type: none"><li>Increased capabilities</li><li>Low license &amp; support costs</li><li>High reliance on internal staff</li><li>Custom internal solution</li></ul>	<ul style="list-style-type: none"><li>Increased capabilities</li><li>High license and support costs</li><li>High reliance on internal staff</li><li>Custom internal solution</li></ul>	<ul style="list-style-type: none"><li>Increased capabilities</li><li>Flexible, modern infrastructure</li><li>Limited experience with cloud tools</li><li>High reliance on internal staff</li></ul>	
		Build and Assemble Components (Custom)	Assemble Open Source Components (Apache Hadoop, Others)	Assemble Commercial Enterprise Components (SAS, Cloudera, IBM, or Oracle)	Assemble Native Cloud Components (Google, AWS or Azure)	Implement on Pre-integrated Platform
		Which set of components should we use?				

Also refer to following playbook elements to determine desired end-state infrastructure approach

- System Capability Model
- State Systems Key Capabilities Evaluation

**Example:** After analysis, an organization may decide to select a "Cloud First Partnership" approach towards the infrastructure and underlying reasons (e.g., domain expertise, future-proof, reliance on internal staff, etc.)

# VENDOR EVALUATION TOOL | OVERVIEW

## Playbook Element Overview

**Objective:** Structured criteria tool to inform evaluation of vendors and/or other partners based on the specific challenges and goals of the assessed organization

**Target Audience:** Assessed organization leaders/operators

## Format of the Element

PowerPoint templates, fully incorporated in this playbook containing:

- **Vendor Summary:** Highlights vendor, key differentiators, benefits and potential drawbacks that may impact the Data Aggregator if a particular vendor was selected
- **Capability Coverage Model:** Visualizes vendor capabilities across the coverage model to provide simpler comparisons across vendors for consideration
- **Capability Detail:** Details reasoning for capability assignments for the capability coverage model due to alignment between technical and business capabilities

## How to Use the Element

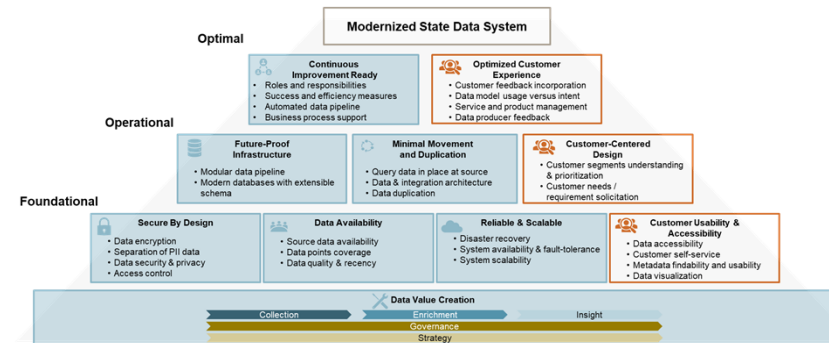

- Understand assessed organization's priorities and strategic goals
- Use Systems Architecture Tool to determine high level vendor strategy that should be targeted with the Data Aggregator
- Identify vendors that align with the strategic and technical priorities and vision of the Data Aggregator
- Conduct vendor interviews to assess capabilities across the capability model
- Summarize findings with the Vendor Evaluation Tool and review with Data Aggregator leadership

## Dependencies on Other Playbook Elements

Dependent on the assessment findings, Systems Architecture Tool, and all other current state assessment elements completed

## Relevant Assessment Framework Principles

- All, data request submitted to client will depend on objective of assessment

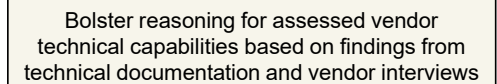

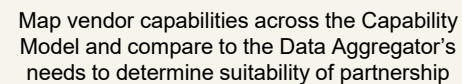

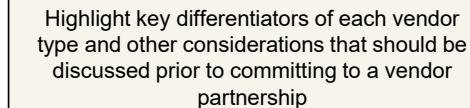

## Key Inputs

- Understanding of customer landscape and priorities
- Stakeholder interviews with:
  - Data aggregator leader/operator (to direct which providers / consumers should be targeted)
  - Data providers/consumers business leaders/operators
  - Data providers/consumers technical SMEs
  - Vendors providing potential implementation solutions

*These templates provide a structure for summarizing findings from vendor assessments and can facilitate a conversation with Data Aggregators about potential vendor partnerships.*

### Vendor Capability Coverage Detail

## VENDOR | TYPE OF PROVIDER | SUMMARY

*Include high level summary of benefits and limitations on the slide identified through the vendor interview process, especially those that represent differentiators, here.*

Service Provider Overview		General Considerations	
<b>Organization Description</b>	<ul style="list-style-type: none"><li>▪ Vendor description goes here with any detail about payment plans or strategic partnerships</li></ul>	<b>Benefits</b>	<ul style="list-style-type: none"><li>▪ Describe overall benefits that the vendor can provide to the Data Aggregator (e.g., features, scalability)</li></ul>
<b>Rationale for Partnership</b>	<ul style="list-style-type: none"><li>▪ Highlight differentiators that make the most sense for the Data Aggregator's strategic goals, infrastructure needs, and capabilities</li></ul>	<b>Drawbacks</b>	<ul style="list-style-type: none"><li>▪ Indicate any drawbacks in implementing this vendor solution (e.g., skills alignments, vendor reliance, lack of extensible schema, etc.)</li></ul>
Strategic Considerations		Additional Considerations	
<ul style="list-style-type: none"><li>▪ Identify any high-level considerations or differentiators that make this vendor a better or worse partner for the Data Aggregator (e.g., domain leadership, operating model impact, etc.)</li></ul>		<ul style="list-style-type: none"><li>▪ Indicate any other interesting factors (e.g., industry reputation, Gartner notes, etc.) that may make a difference in why this vendor should or should not be selected as a partner</li></ul>	

## CAPABILITY MODEL | ANALYSIS RUBRIC

*The Analysis Rubric is used to indicate the ability of target solutions and solution providers to meet a singular Data Aggregator's requirements aligned with core business capabilities.*

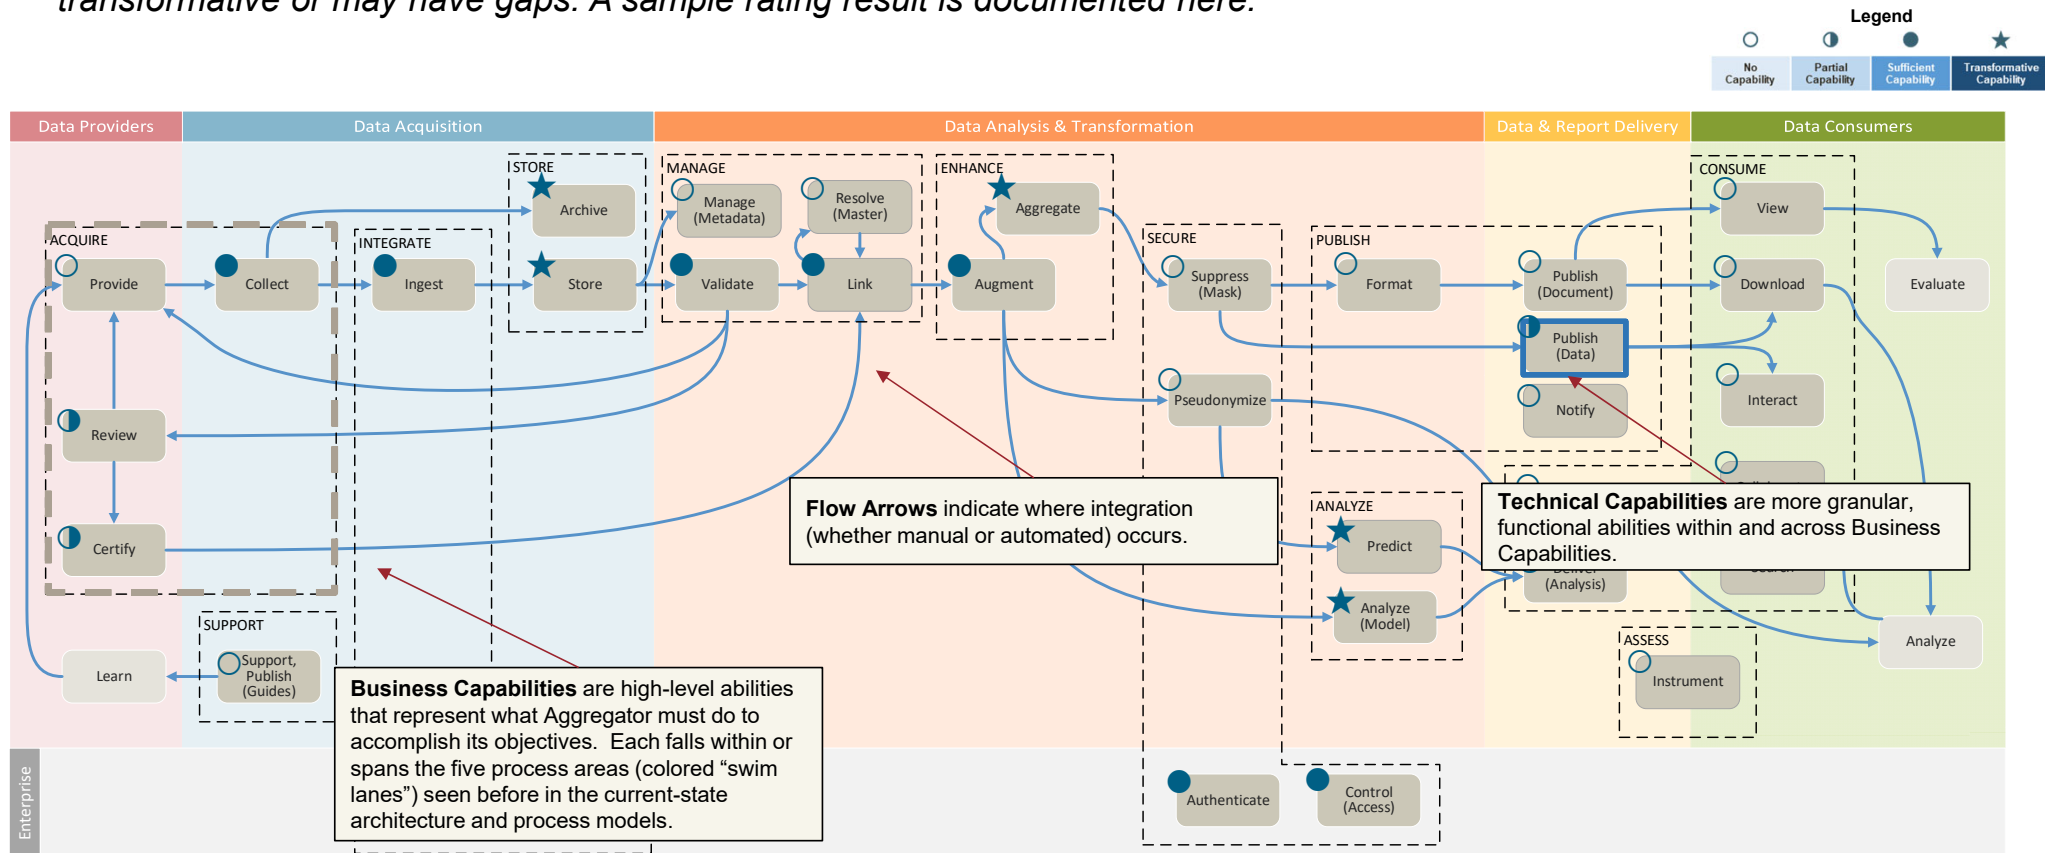

Capability Coverage	Not Assessed	None	Partial	Sufficient	Transformative
Rating Criteria	<ul style="list-style-type: none"> <li>Unable to determine / not assessed</li> </ul>	<ul style="list-style-type: none"> <li>Does not deliver the business capability (third-party / partner offerings may still exist to fill this gap, but not integrated into a single vendor's offering)</li> </ul>	<ul style="list-style-type: none"> <li>Ability to deliver the business capability is incomplete or limited</li> <li>May contribute to a more complete solution, in combination with others' offerings</li> </ul>	<ul style="list-style-type: none"> <li>Ability to deliver the business capability is adequate</li> <li>Meets the Data Aggregator's current needs</li> </ul>	<ul style="list-style-type: none"> <li>Ability to deliver the business capability is exceptional or industry-leading</li> <li>May deliver complete capability and/or significantly increase the Data Aggregator's capability maturity</li> </ul>

Capability coverage exists if 1) there is potential to replace at least part of the Data Aggregator's existing technology/process or 2) there is potential to improve the Data Aggregator's capability maturity

# VENDOR | CAPABILITY COVERAGE MODEL & SAMPLE USE

Rate the vendor against each of the capabilities in the capability model and highlight where the vendors are particularly transformative or may have gaps. A sample rating result is documented [here](#).

# VENDOR CAPABILITY COVERAGE DETAIL | TEMPLATE

*Provide detailed reasoning for technical capability assignments for the entire coverage model based on vendor interviews, technical documentation, and Data Aggregator needs.*

Capability Coverage			
Business Capability		Technical Capability	Product / Service
Data Providers			
Acquire		Provide	<ul style="list-style-type: none"><li>▪ Capability not supported</li></ul>
		Review	<ul style="list-style-type: none"><li>▪ Multi-step processes like the review/certify process can be tracked with a fully-managed state tracker and task coordinator or many other applications (e.g., storage, API, access control, and hosting services)</li><li>▪ <b>Gap:</b> Not an out-of-the-box solution; the serverless application must be designed and implemented using some or all of the above services</li></ul>
		Certify	
Data Acquisition			
Acquire		Collect	<p>Three separate applications allow for:</p> <ul style="list-style-type: none"><li>▪ Creation, operationalization, and management of APIs to avoid interactive file transfers for data collection</li><li>▪ User portal creation that connects easily to other applications</li><li>▪ Authorized user access to transfer files in and out of the object store</li></ul>
Integrate		 Ingest	<ul style="list-style-type: none"><li>▪ ETL (Extract, Transform, Load) tool for processing data and moving it between data stores</li><li>▪ Data warehouse with ability to load raw data files, including fixed-width formats, into its data store</li></ul>

Complete the capability coverage detail model for all business capabilities

# IMPLEMENTATION ROADMAP | OVERVIEW

## Playbook Element Overview

**Objective:** Provides template for presenting, prioritizing, and order of completion of initiatives based on stakeholder interest, funding technical capabilities, and complexity

**Target Audience:** Individuals assessing target organization and assessed organization leadership

## Format of the Element

PowerPoint templates, fully incorporated in this playbook containing:

- **Project Charter:** Describes the project, key milestones, and dependencies or key steps that must take place in order to complete the project
- **Prioritization Guidance:** Demonstrates how activities and initiatives can be prioritized based on stakeholder need
- **Roadmap:** Identifies activities and / or initiatives to complete on a time-bound basis

## How to Use the Element

- Identify assessed organization's priorities and strategic goals
- Create list of potential optimization initiatives for assessed organization
- Complete project charters to flesh out project ideas
- Sort list of improvement initiatives by prioritization developed based on prioritization guidance
- Identify high potential / high value initiatives
- Determine time to complete each initiative and any dependencies between
- Complete roadmap and activity dependencies based on prior conclusions

## Dependencies on Other Playbook Elements

Implementation roadmap is dependent on the assessment findings and all other current state assessment elements completed

## Relevant Assessment Framework Principles

- All, data request submitted to client will depend on objective of assessment

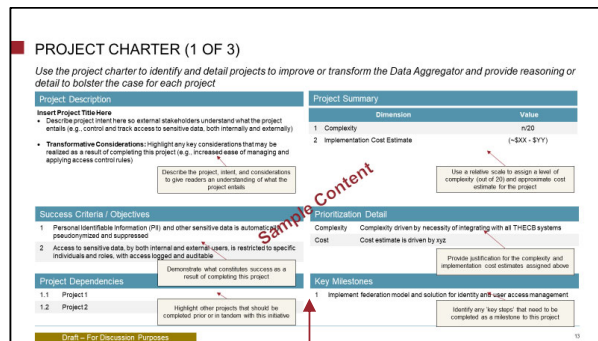

## Key Inputs

- Understanding of customer landscape and priorities
- Stakeholder interviews with:
  - Data aggregator leader/operator (to direct which providers / consumers should be targeted)
  - Data providers/consumers business leaders/operators
  - Data providers/consumers technical SMEs
  - Vendors providing potential implementation solutions

# IMPLEMENTATION ROADMAP TEMPLATES

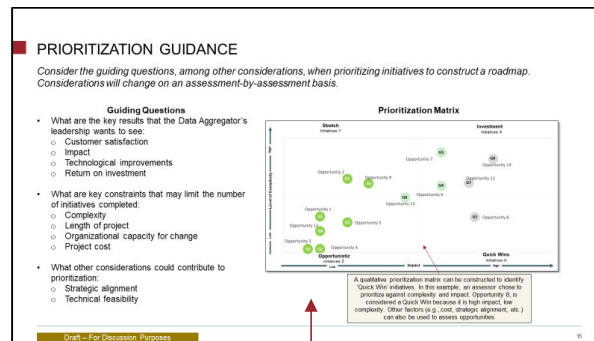

*These templates provide a structure for summarizing improvement opportunities, prioritizing, and creating a high-level project plan that can facilitate a conversation with Data Aggregators about potential organizational and project improvements.*

## Project Charters

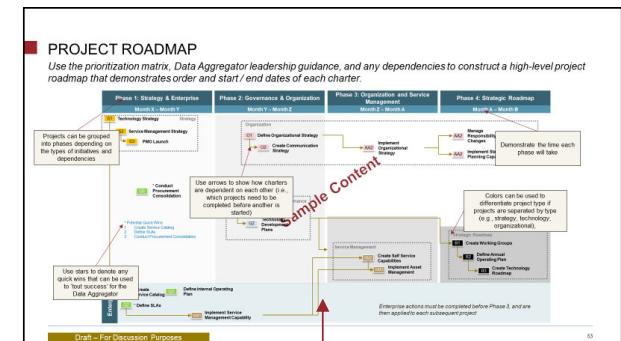

Detail each improvement opportunity on the project charters and highlight key dependencies, complexity, project cost, risks, and any other considerations

## Prioritization Guidance

Consider the highlighted prioritizations that could be used to construct the Project Roadmap

## Project Roadmap

Map opportunities for improvement in order of completion based on individualized prioritization and project charters

# PROJECT CHARTER (1 OF 2)

Use the project charter to identify and detail projects to improve or transform the Data Aggregator and provide reasoning or detail to bolster the case for each project.

## Project Description

### Insert Project Title Here

- Describe project intent here so external stakeholders understand what the project entails (e.g., control and track access to sensitive data, both internally and externally)
- Transformative Considerations:** Highlight any key considerations that may be realized as a result of completing this project (e.g., increased ease of managing and applying access control rules)

Describe the project, intent, and considerations to give readers an understanding of what the project entails

## Project Summary

Dimension		Value
1	Complexity	n/20
2	Implementation Cost Estimate	(~\$XX - \$YY)

Use a relative scale to assign a level of complexity (out of 20) and approximate cost estimate for the project

## Success Criteria / Objectives

- Personal Identifiable Information (PII) and other sensitive data is automatically pseudonymized and suppressed
- Access to sensitive data, by both internal and external users, is restricted to specific individuals and roles, with access logged and auditable

Demonstrate what constitutes success as a result of completing this project

## Project Dependencies

- 1.1 Project 1
- 1.2 Project 2

Highlight other projects that should be completed prior or in tandem with this initiative

## Prioritization Detail

Complexity	Complexity driven by necessity of integrating with all internal systems
Cost	Cost estimate is driven by xyz

Provide justification for the complexity and implementation cost estimates assigned above

## Key Milestones

- 1 Implement federation model and solution for identity and user access management

Identify any 'key steps' that need to be completed as a milestone to this project

# PROJECT CHARTER (2 OF 2)

## Key Requirements (Capability Model & Discovery)

### Project Title

1. Personal Identifiable Information (PII) and other sensitive data must be protected using all necessary security controls
2. A role-based and organization-based access control mechanism must limit access to data and services to authorized users.
3. Access to sensitive data by internal personnel is managed by a system with appropriate security controls, such as separation of duties, role-based access control, access and management logging and audit capabilities.

Describe any requirements or constraints that must be considered throughout the implementation of this project

## Opportunities (Discovery)

### Identity and Access Management

- Determine federation model and solution for identity and user access management
- Implement an enterprise Digital Loss Prevention system to further reduce risks to data privacy

Tie any opportunities back to opportunities discovered in the assessment phase of the project

## Key Decisions

- 1 Should the Data Aggregator use cloud services or other types of software for enterprise-wide applications?
- 2 Should partner organizations and institutions be able to internally delegate access to the Data Aggregator's portals?

Describe key decisions that need to be answered prior to project completion

## Risks

- 1 Lengthy/delayed project acts as bottleneck for downstream data modernization projects
- 2 Security risks due to improper identity & access management configuration

Identify any risks that could challenge project execution or completion – ensure there are mitigations to the risks prior to beginning the project

# PRIORITIZATION GUIDANCE

*Consider the guiding questions, among other considerations, when prioritizing initiatives to construct a roadmap. Considerations will change on an assessment-by-assessment basis.*

## Guiding Questions

- What are the key results that the Data Aggregator's leadership wants to see:
  - Customer satisfaction
  - Impact
  - Technological improvements
  - Return on investment
- What are key constraints that may limit the number of initiatives completed:
  - Complexity
  - Length of project
  - Organizational capacity for change
  - Project cost
- What other considerations could contribute to prioritization:
  - Strategic alignment
  - Technical feasibility

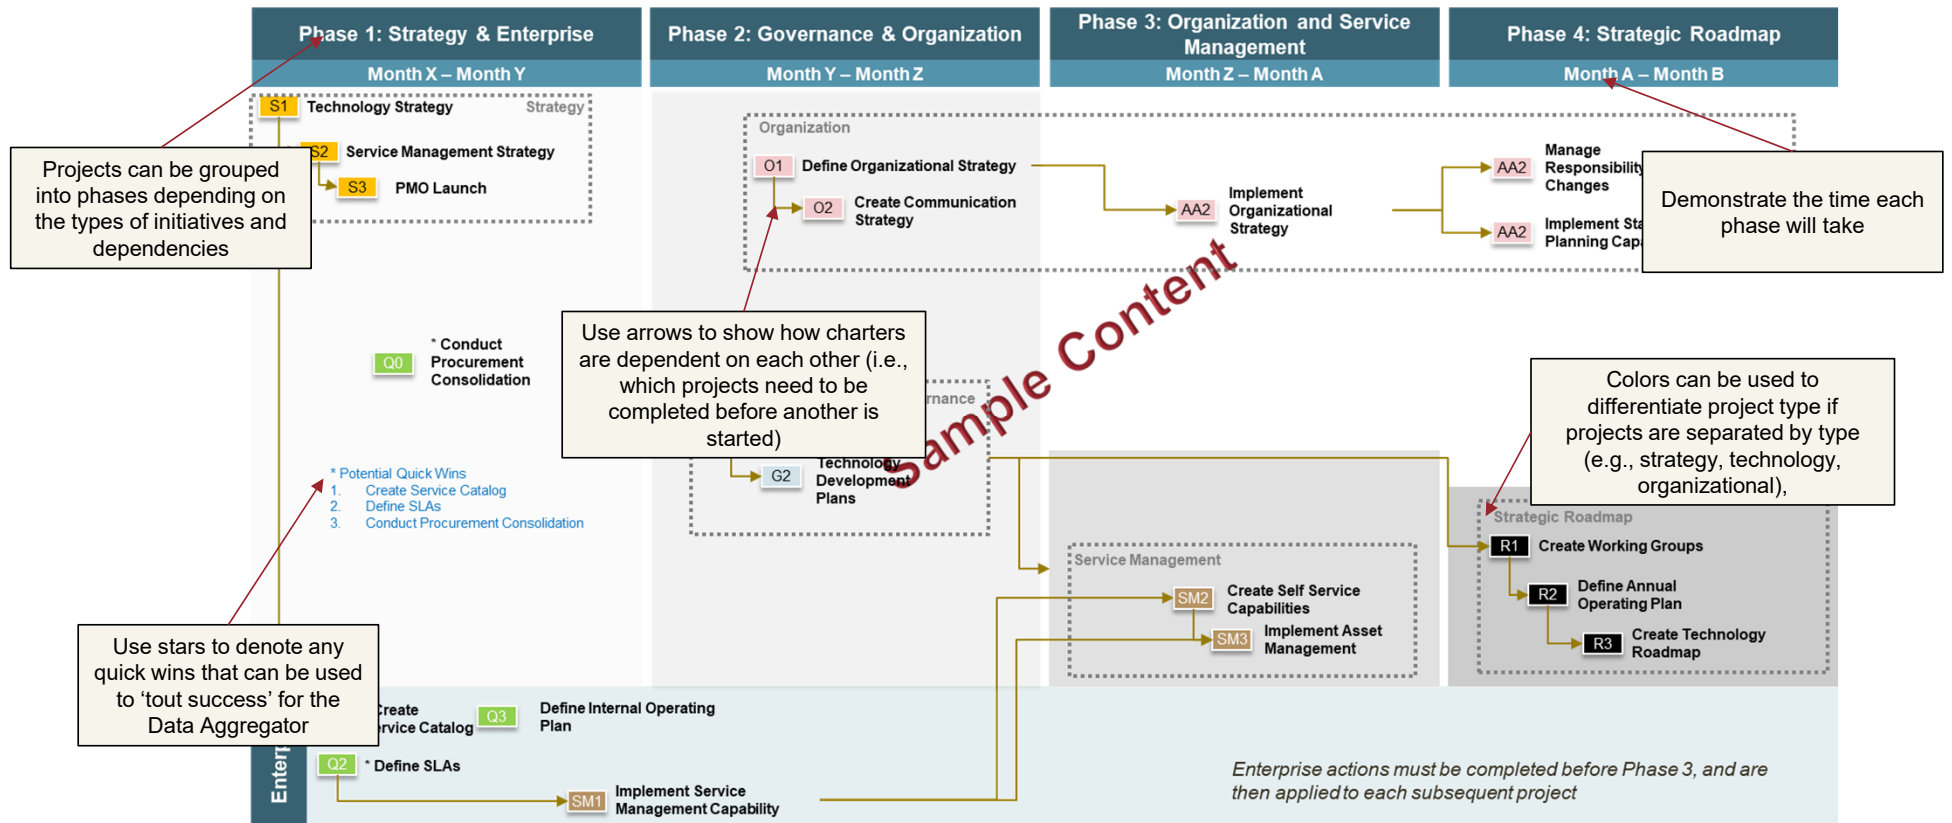

## Prioritization Matrix

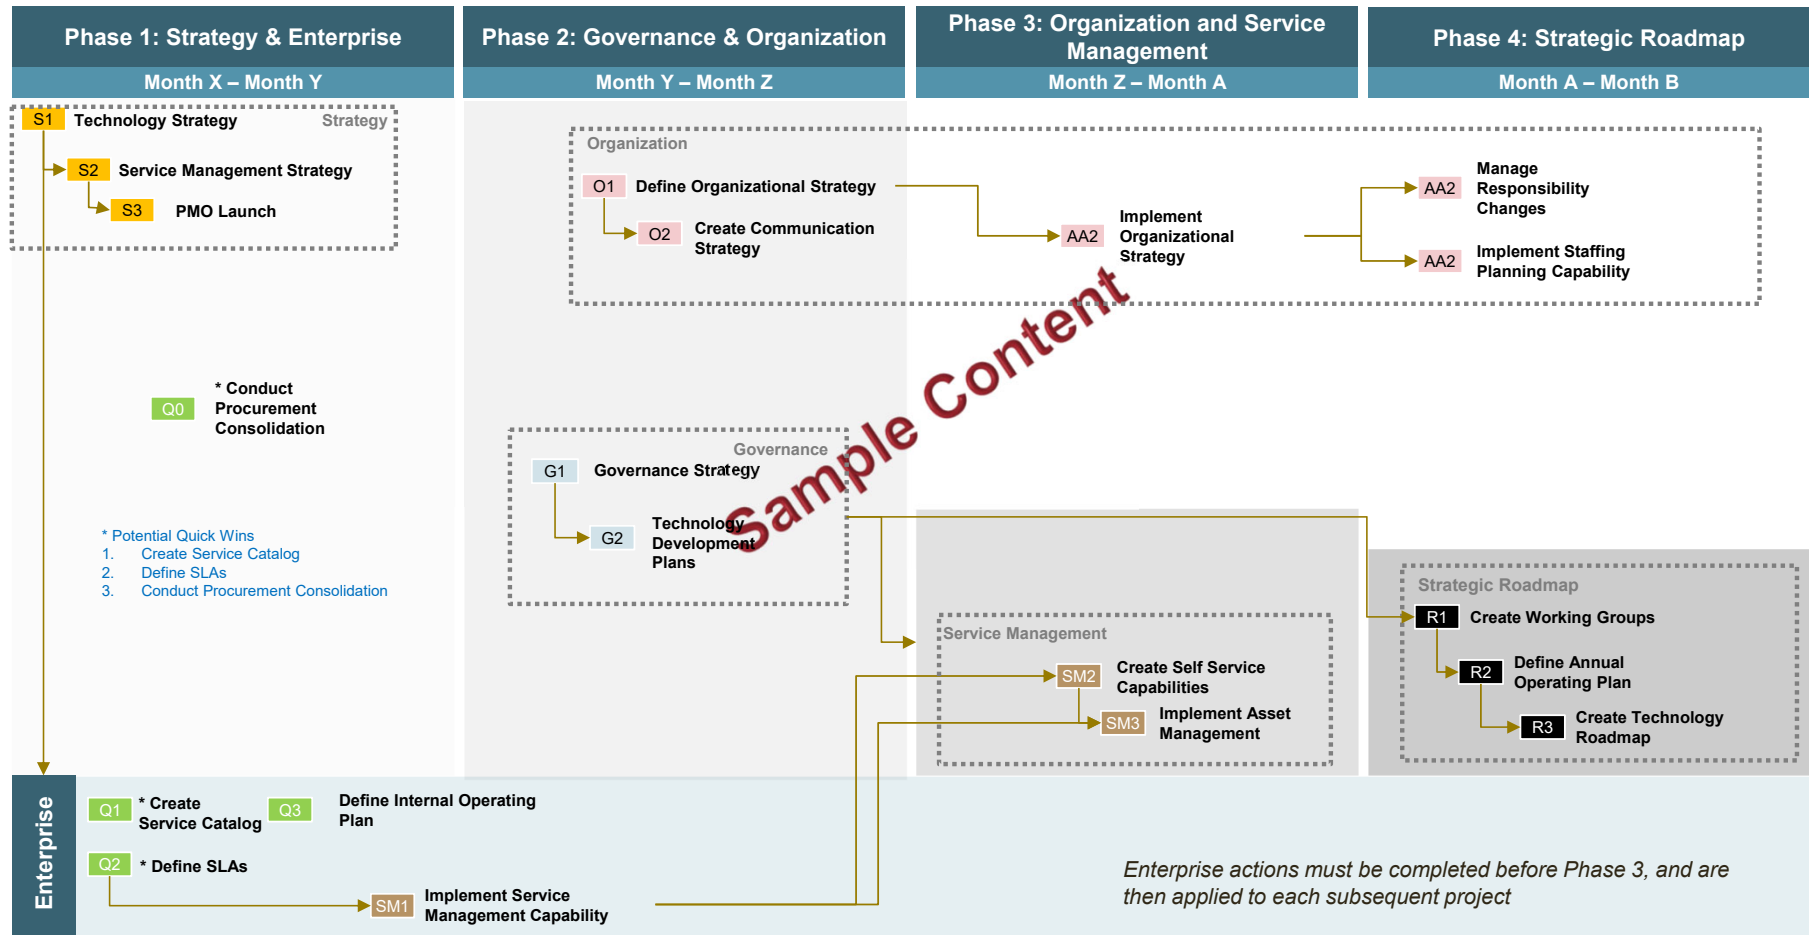

A qualitative prioritization matrix can be constructed to identify 'Quick Win' initiatives. In this example, an assessor chose to prioritize against complexity and impact. Opportunity 8, is considered a Quick Win because it is high impact, low complexity. Other factors (e.g., cost, strategic alignment, etc.) can also be used to assess opportunities

# PROJECT ROADMAP

Use the prioritization matrix, Data Aggregator leadership guidance, and any dependencies to construct a high-level project roadmap that demonstrates order and start / end dates of each charter.

# PROJECT ROADMAP | TEMPLATE

# APPENDIX

## State Data Use Case Examples

## STATE DATA USE CASES EXAMPLES | USE CASE A

Use Case A: Provide better linkages and longitudinal views	
<p><b>Success scenario:</b> Users can access and easily navigate purposefully-linked, granular data about students who move across types and levels of institutions and the workforce to answer research questions to inform policy, strategy and funding.</p> <p><b>For example: I want to...</b></p> <ol style="list-style-type: none"><li>1) I want to see clear linkages to post-graduation outcomes so that I can make informed changes to degrees, depts, student services, etc. to promote credential to career pathway, especially for low-income, minority and first-generation students</li><li>2) I want to evaluate the value of degree paths at my institution by looking at post-certification/degree earnings and education debt by students type and pathway against my peers so I can make adjustments and share the value story with funders</li><li>3) I want to know what happened to the students who transferred from my institution: with information on their paths (time to completion, degree, etc.) and outcomes, so I can adjust services and strengthen connections and alignment to other institutions</li><li>4) I want to know the background (high school, test scores, prior college experience, etc.) of the students who have succeeded or dropped out of my institution, as quickly as possible, so that we can be better support student success</li></ol>	<p><i>"We want more statewide high school data. We want more dual credit information, what high school they came from, etc. WE want to push the agreement between data aggregators to do more, which can help solve the issue of matching."</i></p> <p><i>"Create a transfer student report. Right now I have to piece together on my own with NSC data. This would be really helpful to the community colleges of the state."</i></p> <p><i>"We are pulling together pieces of information instead of having one source of truth. I spend so much free time pulling common data sets to help educate my team on where and how to get data."</i></p> <p><i>"Between K-12, postsecondary, and workforce data, we have to load and transform 3 times before it can be leveraged. We built a predictive analytics tool of top of the data aggregator's data. If the data aggregator did that, it would be a game changer."</i></p>

## STATE DATA USE CASES EXAMPLES | USE CASE B

Use Case B: Support continuous improvement	
<p><b>Success scenario:</b> High quality data is provided more frequently and at a granular level that allows institutions to evaluate performance across their cohort to identify patterns in programs and initiatives that produce quality student outcomes. Data aggregator understands institutional needs and proactively provides guidance when they find evidence of things that are working.</p> <p><b>For example: I want to...</b></p> <ol style="list-style-type: none"> <li>1) I want to understand on a quarterly basis how my key performance indicators (including enrollment, time to graduation, graduation, etc.) compare to other state institutions, and in particular a cohort of peers that I have defined, so that I know where I have opportunity for improvement</li> <li>2) I want to drill down into the data in areas where my peers are having success so that I can develop a set of recommended actions that we might explore or take</li> <li>3) I want to access research that others have already produced and the stories around the data that will help me understand whether solutions/changes/actions are right for my institution as I look to improve student outcomes</li> <li>4) I want an organization with a view across the state to point out findings and stories of success because I don't have the time to do this analysis myself</li> <li>5) I want reliable, high quality data on programs at peer institutions so I can rate program vitality, driving program creation, funding appropriation</li> </ol>	<p><i>"What comes back from the data aggregator is just a slice of what was submitted – so we don't really have a strong need to use [data aggregator's data]."</i></p> <p><i>"Improve the timeliness of the data. What we get is months or years out because of certification."</i></p> <p><i>"Data aggregator hasn't had the appetite to get to student level data due to FERPA. But it's all about the student level data for the institutions. Ultimately, we need to design student services using data but that's not supported by the data aggregator due to level of granularity."</i></p>

## STATE DATA USE CASES EXAMPLES | USE CASE C

Use Case C: Collaborate and share strategic insights	
<p><b>Success scenario:</b> The data aggregator leverages their central role and statewide view to act as a connector and strategic partner to support institutions that are looking for data-driven insights, best practices and projections.</p> <p><b>For example: I want to...</b></p> <ol style="list-style-type: none"><li>1. I want to find and access data sets and code that others have produced to generate forecasts about how [example: new legislative policies, changes to enrollment requirements, etc.] might impact my KPIs</li><li>2. I want a partner who has access to a state level view of what different institutions are asking or trying and who is able to do data “sense-making” and share insights, including stories that add context to data, so I can more easily learn things that will improve my strategic and operational decision-making</li><li>3. I want to avoid putting together a research report from scratch on questions that others have already researched, in whole or in part</li><li>4. I want to get connected to peer groups that can give me feedback on how to use state-wide data</li></ol>	<p><i>“Engagement with the data aggregator to this point is mostly transactions – troubleshooting no reports, new report requirements, etc. It’s not really strategic.”</i></p> <p><i>“I would like to see examples on the website of analytical models – highlight how things are being done by others.”</i></p> <p><i>“If I have questions, the data aggregator team just refer you back to the data provider. But we aren’t involved in submission, so we don’t have context to know what to do”</i></p> <p><i>“Could we use the transparency framework to share data sets and the story behind what happened to drive good outcomes at other schools?”</i></p>

## STATE DATA USE CASES EXAMPLES | USE CASE D

Use Case D: More easily fulfill state and federal reporting requirements	
<p><b>Success scenario:</b> There are newer, better processes for submitting data to the data aggregator supported by defined change management practices that include user feedback. Users have access to some data prior to state-wide certification.</p> <p><b>For example: I want to...</b></p> <ol style="list-style-type: none"><li>1) I want options for how to submit our data: it would be easier if I could deliver data in a SQL file (though I know that might be too advanced for small community colleges)</li><li>2) I want to receive timely, consistent communication and clear, complete documentation about proposed changes to reporting requirements so that I might provide feedback on impact or otherwise try to lessen the impact on my resources - without compromising the value of the new requirements</li><li>3) I don't want to wait a long time for statewide data verification. I want someone to help the institutions that consistently have trouble submitting their data, OR, I want to have access with an understanding of where data is still incomplete</li><li>4) I want a single portal/process for report submission. Outside of the current reporting, we currently email flat files to various points of contact at the data aggregator</li><li>5) I keep a copy of the data submitted to the data aggregator to assist in national reporting requirements</li></ol>	<p><i>"Don't just initiate changes at ad hoc times during the year: we spend a lot of time reprogramming."</i></p> <p><i>"In the interest of getting timely data, I think people are relaxing more about whether everyone has to be certified and more accepting of getting data with notations about how complete it is."</i></p> <p><i>"It takes us most of the semester to scrub data and make sure it's clean and we are always right up against the data aggregator's deadline."</i></p>

## STATE DATA USE CASES EXAMPLES | USE CASE E

Use Case E: Use demographics and financial aid details to analyze data	
<p><b>Success scenario:</b> To better align with state goals, users need to access more detailed data, and in particular demographic details to support equity and financial aid data to understand and control education costs.</p> <p><b>For example: I want to...</b></p> <ol style="list-style-type: none"><li>1) To support our goals around equity and inclusion, I want to filter enrollment performance measures by demographic data and see how our college is performing in line with my geographic area and relative to my peers</li><li>2) To support our efforts to close the achievement gap for low income, minority and first-generation students, I want to see how our outcome measures compare to other colleges (making sure data element definitions are the same across institutions)</li><li>3) We could be doing much more with financial aid data. I want to be able to look at trends that show the pathways of students alongside their financial aid to better understand how financial aid or emergency financial aid can support student outcomes</li></ol>	<p><i>"I'm trying to understand achievement gaps and what helps certain kids graduate and be successful versus those who don't graduate."</i></p> <p><i>"We can't ask a question of the data and get the answers that we need. We need to download, add other sources and manipulate and then document for ourselves what we did."</i></p> <p><i>"Financial data is very difficult to find and download to do analysis."</i></p>

## STATE DATA USE CASES EXAMPLES | USE CASE F

Use Case F: Perform better forecasting	
<p><b>Success scenario:</b> By providing users access to richer data, more frequently and proactively, the data aggregator recognizes and supports predictive analytics and innovative modeling approaches that users have adopted</p> <p><b>For example: I want to...</b></p> <ol style="list-style-type: none"><li>1) I want to understand macro trends in education to evolve our service delivery model: where is Higher Ed going, with online learning, dual enrollment, HS college level courses, etc. Who are the students and what are they asking for?</li><li>2) I want a single source of reliable data to feed our team's predictive model on high demand fields so I can make informed investments in departments and faculty recruiting</li><li>3) I want to receive notification from a trusted data source(s) that updated data is available every semester (or more) so that I have greater confidence that our forecasts are current and relevant</li></ol>	<p><i>"It would be great if we could just get data automatically and it's updated. We don't get any notification that new data is available."</i></p> <p><i>"Data aggregator should be an expert on education trends. You can't do that if you are always looking way back in the rearview mirror."</i></p> <p><i>"A great benefit would be to make the interactive data more downloadable for Tableau, PowerBI, Infographics. Right now it's too complicated."</i></p>

## STATE DATA USE CASES EXAMPLES | USE CASE G

Use Case G: Answer strategic policy questions	
<p><b>Success scenario:</b> Rich, linked data is more easily accessible to a broad number of users, tied to real business decisions that need to be made as well as to policy insights and decisions</p> <p><b>For example: I want to...</b></p> <ol style="list-style-type: none"><li>1) I want to access financial aid and course completion data across colleges so that I can produce an annual report on how efficiently students are completing degrees of value in our state</li><li>2) I want easier, cheaper access to secure, detailed student data in order to research strategic policy questions. This includes a full view of available relational data sets, data definition consistency across years of historical data, and better alignment between our state's other official data providers</li><li>3) When policy changes are made, I want reporting requirements to be reflective of what institutions will need to manage for success and not just what legislators need to measure success</li><li>4) I want an easy to navigate interface so I can quickly find data visualizations that help me understand how my institution is performing relative to my peers on issues related to recent policy changes</li></ol>	<p><i>"We recently requested macro graduation rates across the state. What does our rank look like across the state, including by student demographics. Our request was denied, and no explanation given."</i></p> <p><i>"We engage with data through the data aggregator, which has all manner of issues – it's not developed for the democratization of data. And the data is 80% of what we want, but we need additional tools to access."</i></p> <p><i>"We don't have the time or resources for in-depth analysis and comparisons so I'm just trying to help leadership with short and sweet views"</i></p>

## STATE DATA USE CASES EXAMPLES | USE CASE H

Use Case H: Understand and measure educational outcomes	
<p><b>Success scenario:</b> A user can access and utilize linked, granular data about various entities (e.g., students, institutions from Pre-K to the workforce, teachers, etc.), in order to understand the impact of different variables on educational outcomes to understand the success of educational programs and policies.</p> <p><b>For example: I want to...</b></p> <ol style="list-style-type: none"> <li>1) I want to see clear linkages to post-graduation outcomes so that I can provide information to lawmakers, policymakers, and lobbyists to advocate informed change on a statewide basis</li> <li>2) I want to evaluate the value of public and private institutions by looking at post-graduation outcomes against peer organizations so I can make funding recommendations to lawmakers</li> <li>3) I want to know how the level and type of teacher education impacts success of the students they teach to advocate for changes at postsecondary institutions</li> <li>4) I want to know the long-term outcomes of students who take technical courses in high school, technical centers, and postsecondary institutions based on where they took classes, how many they took, and how general or specific their course of study was to craft potential 'best practice' course recommendations for national advocacy groups</li> </ol>	<p><i>"We want Pre-K data connected to outcomes in third grade to understand which programs its important to fund especially because of the legislative and private focus on funding these programs."</i></p> <p><i>"It's important to include data on students who attend K-12 and then go straight to the workforce. Right now it's a black box for 20 to 30 percent of K-12 student outcomes."</i></p> <p><i>"We need student, teacher, or institution-level data at a small cell-size to understand causality."</i></p> <p><i>"We need entity-level comparison data in order to have a comparison group to test hypotheses."</i></p>

## STRATEGIC USE CASES | USE CASE I

Use Case I: Assess programmatic outcomes	
<p><b>Success scenario:</b> A user can understand the impact of different variables on a constituent's life journey and programmatic outcomes of select state services and policies via access to linked, granular data about various entities (e.g., students, constituents, state sponsored programs, etc.).</p> <p><b>For example: I want to...</b></p> <ol style="list-style-type: none"><li>1) I want to understand what happens to a constituent after they are done using my services – what jobs do they get? How long do they stay in those jobs? Do they increase their education afterwards?</li><li>2) I want to understand what happens when I refer individuals to other state services – do the constituents use those services? Why or why not?</li><li>3) I want to understand where pools of talent lie in the state – what is the output of our education and workforce pipelines for particular areas?</li><li>4) I want to know how programs set constituents up for success or failure (e.g., criminal justice, health services, etc.) – do they work?</li></ol>	<p><i>"We want to track outcomes of incarceration transitional programs to understand recidivism rates and how these tie to other parts of the constituent journey."</i></p> <p><i>"We need to know how referrals work for TN Cares programs – what works and why?"</i></p> <p><i>"We need to be able to demonstrate what areas of the state hold the most promise for potential employers who want to locate here."</i></p> <p><i>"We view our programs as temporary services, and we want to understand what happens to the people who never return to receive those services – what happened to them and why were they successful?"</i></p>
